Multi-Domain Sketch Recognition

Lecture #11: Sketch Understanding
Joseph J. LaViola Jr.
Fall 2016

Slides adapted from Alvarado, Multi-Domain Sketch Understanding, SIGGRAPH course #3, 2007.

Recall Pen-Based Interface Dataflow

Raw Stroke Data → Preprocessing → Segmentation

Sketch Understanding

Ink Parsing → Classification

Make Inferences

Feature Extraction and Analysis
Building Recognition Systems

- Building each system requires:
  - sketch recognition expertise
  - a lot of time (2-5 person years!)
  - built in domain assumptions to improve recognition

A Multi-Domain Sketch Recognition Engine
Enabling Natural Interaction

- **Goal:**
  - recognition engines for multiple domains
- **Core challenge:**
  - multi-domain recognition

Sketch Recognition Subtasks

- Need a multi-domain solution!

![Diagram showing subtasks of sketch recognition: Stroke Fragmentation, Symbol recognition, Stroke grouping, NOR, and additional labels like "slow path" and "long path".](image)
Multi-Domain Sketch Recognition Architecture

- Strokes
- Line, Ellipse, Arc, Polyline
- Primitive Recognizer/Fragmenter
- Generalized Matching Engine
- Post Processor
- Recognized Objects

Multi-Domain Sketch Recognition Architecture

- Strokes
- Line, Ellipse, Arc, Polyline
- Primitive Recognizer/Fragmenter
- Generalized Matching Engine
- Post Processor
- Recognized Objects
Family Tree Domain

- **Compound:**
- **Domain:**

Domain Patterns:

- **Family Tree Domain**
  - Divorce-link
  - Marriage-link
  - Child-link
  - Male
  - Female

Knowledge Representation

**LADDER [Hammond03]**

(Define Arrow

(Subshapes (Line shaft) (Line head1) (Line head2))

(Constraints (coincident shaft.p1 head1.p1) (coincident shaft.p1 head2.p1) (equalLength head1 head2) (smaller head1 shaft) (acuteAngle head1 shaft) (acuteAngle head2 shaft))))
Knowledge Representation

(Define Child-link
  (Subshapes (Arrow a)))

(Define Current-Source
  (Subshapes (Arrow a)
    (Ellipse e))
  (Constraints
    (contains e a)))

Multi-Domain Sketch Recognition Architecture

Strokes

Line, Ellipse, Arc, Polyline
Shape Descriptions

Primitive Recognizer/Fragmenter

Generalized Matching Engine

Post Processor

Recognized Objects
Recognition overview

- Task: Simultaneous fragmentation, grouping and symbol identification
- Constraint-based approach
- Generate and test

Definition

**Hypothesis:** A shape description with associated mapping from subshapes to user’s strokes.

Arrow hypothesis 1

Arrow hypothesis 2
Hypothesis-based recognition

- Given a hypothesis, determine if it matches a shape description by testing constraints

```lisp
(Define Arrow
  (Subshapes
    (Line shaft)
    (Line head1)
    (Line head2))
  (Constraints
    (coincident shaft.p1 head1.p1)
    (coincident shaft.p1 head2.p1)
    (equalLength head1 head2)
    (smaller head1 shaft)
    (acuteAngle head1 shaft)
    (acuteAngle head2 shaft)))
```

Fall 2016  CAP 6105 – Pen-Based User Interfaces  ©Joseph J. LaViola Jr.
Hypothesis-based recognition: Issues

- Too many hypotheses to try them all

\[ \sum_{i \in S} \binom{n}{k_i} (k_i)! \]

- Constraints depend on context
  
  And this only considers shapes independently!

Definition

- **Partial Hypothesis**: A hypothesis with unbound subshapes

  Quadrilateral partial hypothesis

  L1, L2, L3

  L4 is unbound
Recognition Using Partial Hypotheses

- Generating Hypotheses (rule-based)
  - generate partial hypotheses (PHs) based on easily recognizable low-level shapes
  - fill in strong PHs with unrecognized strokes
  - prune weak PHs

- Evaluating Hypotheses (probabilistic)
  - how well do user’s strokes fit low level shapes?
  - how well are constraints satisfied?

Bayesian Networks [Pearl88]

- Reason about events/entities
- Two parts
  - directed Acyclic Graph:
    - assign meaning to nodes
    - specify which variables influence one another
  - conditional Probability Tables
    - specify how variables influence one another

Use Bayes Rule to reason about the certainty of each variable
Bayesian Networks [Pearl88]

- Observations give evidence for other variables
  Say we observe \( A=t \), then
  \[ P(E|A) = 0.0056 \]
  \[ P(B|A) = 0.49 \]

- Important Phenomenon: Explaining away
  If we also hear there has been an earthquake (i.e., \( E=t \)), then
  \[ P(B|A,E) = 0.001 \]
Shape Fragments

(Define Arrow
(Subshapes
L1: (Line shaft)
L2: (Line head1)
L3: (Line head2))
(Constraints
C1: (coincident shaft.p1 head1.p1)
C2: (coincident shaft.p1 head2.p1)
C3: (equalLength head1 head2)
C4: (smaller head1 shaft)
C5: (acuteAngle head1 shaft)
C6: (acuteAngle head2 shaft)))

Arrow Hypothesis
shaft = s2
head1 = s3
head2 = s4

Shape Fragments: Measurement Nodes

(Define Arrow
(Subshapes
L1: (Line shaft)
L2: (Line head1)
L3: (Line head2))
(Constraints
C1: (coincident shaft.p1 head1.p1)
C2: (coincident shaft.p1 head2.p1)
C3: (equalLength head1 head2)
C4: (smaller head1 shaft)
C5: (acuteAngle head1 shaft)
C6: (acuteAngle head2 shaft)))

Squared error between stroke and best fit line

Distance between shaft.p1 head.p1
Shape Fragments

(Define Arrow
(Subshapes
L1: (Line shaft)
L2: (Line head1)
L3: (Line head2))
(Constraints
C1: (coincident shaft.p1 head1.p1)
C2: (coincident shaft.p1 head2.p1)
C3: (equalLength head1 head2)
C4: (smaller head1 shaft)
C5: (acuteAngle head1 shaft)
C6: (acuteAngle head2 shaft)))

shaft = s2
head1 = s3
head2 = s4

Arrow Hypothesis #2

Shape Fragments: Another Hypothesis

(Define Arrow
(Subshapes
L1: (Line shaft)
L2: (Line head1)
L3: (Line head2))
(Constraints
C1: (coincident shaft.p1 head1.p1)
C2: (coincident shaft.p1 head2.p1)
C3: (equalLength head1 head2)
C4: (smaller head1 shaft)
C5: (acuteAngle head1 shaft)
C6: (acuteAngle head2 shaft)))

shaft = s3
head1 = s1
head2 = s2

Arrow Hypothesis #2

shaft = s3
head1 = s1
head2 = s2
Shape Fragments: Partial Hypothesis

(Define Arrow

(Subshapes
  L1: (Line shaft)
  L2: (Line head1)
  L3: (Line head2))

(Constraints
  C1: (coincident shaft.p1 head1.p1)
  C2: (coincident shaft.p1 head2.p1)
  C3: (equalLength head1 head2)
  C4: (smaller head1 shaft)
  C5: (acuteAngle head1 shaft)
  C6: (acuteAngle head2 shaft))

shaft = s1
head1 = s2
head2 = ??

Composing Shape Fragments

Each node represents a hypothesis
Hypothesis Generation

- **Bottom Up**
  - partial hypotheses generated based on rough classification for objects and constraints

- **Top Down**
  - strokes possibly reclassified to fit into PHs

- **Pruning**
  - keep number of hypotheses manageable

---

An Illustration

- **Parent-child**
- **Child-link**
- **Arrow**
- **Connects(i1, i3)**
- **Connects(i1, i2)**
- **Same-length(i3, i2)**
- **Ellipse(e1)**
- **Line(l1)**
- **Line(l2)**
- **Line(l3)**
- **Female(f1)**
- **Female(f2)**
- **Stroke(s1)**
- **Stroke(s2)**
- **Stroke(s3)**
- **Stroke(s4)**
- **Stroke(s5)**
