3D User Interface System Control Techniques

Lecture #11: System Control
Spring 2016
Joseph J. LaViola Jr.

Universal 3D Interaction Tasks

- Navigation
  - Travel – motor component
  - Wayfinding – cognitive component
- Selection
- Manipulation
- **System control**
- Symbolic input
System Control

- Often considered glue of 3D UI
- Specify the “what”
- Commands are issued to
  - request system to perform a particular function
  - change interaction mode
  - change system state

Human Factors and System Control

- Learn from mechanical systems
  - transfer of mechanical energy/information to system
  - control-body linkage
    - interaction between control device and human body
- Effectiveness of control-body linkage
  - human experience, training
  - shape and size of control
  - visual representation and labeling
  - methods of selection
Classification

Graphical Menus – Adapted 2D Menus
Graphical Menus – 1-DOF Menus

Graphical Menus – TULIP
Graphical Menus – 3D Widgets (1)

Graphical Menus – 3D Widgets (2)

Command and Control Cube
Graphical Menus - Design

- **Placement**
  - world-referenced (freely in world)
  - object-referenced (centered to object in world)
  - head-referenced (view centered)
  - body-referenced
  - device-centered

- **Selection**
  - Degrees of freedom, constraints

- **Representation and structure**
  - form, size, space, affordance
  - hierarchy: functional and semantic grouping, context sensitivity, control coding

Voice Commands

- **Speech recognition**
- **Spoken dialogue techniques**

- **Requires**
  - speech recognition engine
    - speaker dependent vs. independent
    - varying vocabulary size
  - good microphone

- **Invisible to the user**
- **Push to talk**
Gestural Commands

- One of the first system control techniques
- Posture – static hand configuration
- Gesture – dynamic movement

Gesture Command Types

- Speech connected
- Mimic gestures
- Symbolic
- Sign language
Tools

- Provide directness of interaction
- Familiar (real-world devices)
- Physical tools
  - real physical objects (props)
  - may have graphical representation
- Virtual tools

Tools - Virtual Tool belt
Tools – Tricorder

Tools – TUI
Multimodal System Control

- More than one input modality (speech, gesture, facial expression, etc...)
- Advantages
  - decoupling
  - flexibility and complementary behavior
  - control of mental resources

Multimodal Interaction – Examples
Next Class

- Symbolic Input
