Catalog Description: 3D user interaction, spatial user interfaces, selection and manipulation, 3D navigation, system control, evaluation methodologies, augmented and mixed reality, input and output hardware

Course Objectives: 3D User Interfaces for Games and Virtual Reality is a course designed to give students a rigorous introduction to the design, implementation, and evaluation of the fundamental techniques in spatial 3D interaction.

Student Requirements:
1. Star Wars Game -- Students will create a lightsaber game where they control the saber with and use the force using the HTC Vive.

2. Fruit Ninja -- Students will create a Fruit Ninja game where they will travel through a maze and fend off attacking fruit using the HTC Vive.

3. Survey paper -- Students will write a paper on a 3D UI topic of their choice, focusing on summarizing and aggregating work done in the last decade.

4. Paper Presentations -- Students will have to present at least one paper on a topic in 3DUIs.

5. Final Project -- Students will do a final project of their choice that explores a particular concept in 3D user interfaces, augmented reality, or virtual reality. They must first write a short proposal and get it approved by the professor.

Tentative Grading Scheme:

| Assignment 1 | 15% |
| Assignment 2 | 15% |
| Survey Paper | 15% |
| Paper Presentations | 5% |
| Final Project | 50% |

The instructor reserves the right to use plus/minus grading in this course.
