# Hand Gesture Recognition

Copyright Mubarak Shah 2003

## Seven Gestures

## Gesture Phases

- Hand fixed in the **start position**.
- Fingers or hand move smoothly to **gesture position**.
- Hand fixed in **gesture position**.
- Fingers or hand return smoothly to **start position**.

Copyright Mubarak Shah 2003

# Finite State Machine

Copyright Mubarak Shah 2003

## Main Steps

- Detect fingertips.
- Create fingertip trajectories using motion correspondence of fingertip points.
- Fit vectors and assign motion code to unknown gesture.
- Match

## Action Recognition Using Temporal Templates

Jim Davis and Aaron Bobick

Copyright Mubarak Shah 2003

## Main Points

- Compute a sequence of difference pictures from a sequence of images.
- Compute Motion Energy Images (MEI) and Motion History Images (MHI) from difference pictures.
- Compute Hu moments of MEI and MHI.
- Perform recognition using Hu moments.

Copyright Mubarak Shah 2003

## MEI and MHI

### Motion-Energy Images (MEI)

$$E_{\tau}(x, y, t) = \bigcup_{i=0}^{\tau-1} D(x, y, t - i)$$

### Motion History Images (MHI) Change Detected Images

$$H_{\tau}(x, y, t) = \begin{cases} \tau & \text{if } D(x, y, t) = 1 \\ \max(0, H_{\tau}(x, y, t - 1) - 1) & \text{otherwise} \end{cases}$$

Copyright Mubarak Shah 2003

# MEIs

Copyright Mubarak Shah 2003

# Color MHI Demo

Copyright Mubarak Shah 2003

# Summary

- Use seven Hu moments of MHI and MEI to recognize different exercises.
- Use seven views (-90 degrees to +90 degrees in increments of 30 degrees).
- For each exercise several samples are recorded using all seven views, and the mean and covariance matrices for the seven moments are computed as a model.
- During recognition, for an unknown exercise all seven moments are computed, and compared with all 18 exercises using Mahalanobis distance.
- The exercise with minimum distance is computed as the match.
- They present recognition results with one and two view sequences, as compared to seven view sequences used for model generation.

# Moments

Binary image

## General Moments

$$m_{pq} = \int \int x^p y^q \rho(x, y) dx dy$$

## Central Moments (Translation Invariant)

$$\mu_{pq} = \int \int (x - \bar{x})^p (y - \bar{y})^q \rho(x, y) d(x - \bar{x}) d(y - \bar{y})$$

$$\bar{x} = \frac{m_{10}}{m_{00}}, \bar{y} = \frac{m_{01}}{m_{00}} \quad \text{centroid}$$

Copyright Mubarak Shah 2003

## Central Moments

$$\mu_{00} = m_{00} \equiv \mu$$

$$\mu_{01} = 0$$

$$\mu_{10} = 0$$

$$\mu_{20} = m_{20} - \mu \bar{x}^2$$

$$\mu_{11} = m_{11} - \mu \bar{x} \bar{y}$$

$$\mu_{02} = m_{02} - \mu \bar{y}^2$$

$$\mu_{30} = m_{30} - 3m_{20} \bar{x} + 2\mu \bar{x}^3$$

$$\mu_{21} = m_{21} - m_{20} \bar{y} - 2m_{11} \bar{x} + 2\mu \bar{x}^2 \bar{y}$$

$$\mu_{12} = m_{12} - m_{02} \bar{x} - 2m_{11} \bar{y} + 2\mu \bar{x} \bar{y}^2$$

$$\mu_{03} = m_{03} - 3m_{02} \bar{y} + 2\mu \bar{y}^3$$

Copyright Mubarak Shah 2003

## Moments

**Hu Moments: translation, scaling and rotation invariant**

$$v_1 = \mu_{20} + \mu_{02}$$

$$v_2 = (\mu_{20} - \mu_{02})^2 + \mu_{11}^2$$

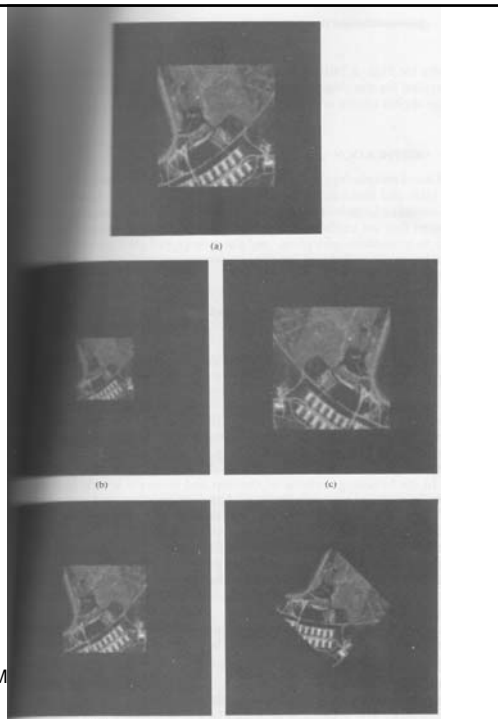

$$v_3 = (\mu_{30} - 3\mu_{12})^2 + (3\mu_{12} - \mu_{03})^2$$

$$v_4 = (\mu_{30} + \mu_{12})^2 + (\mu_{21} + \mu_{03})^2$$

# Conclusions

- Many natural objects are easily recognized by their color and texture signatures (shape is often not needed)
- Many events are easily detected and recognized by the classes of the comprising objects and their approximate motions
- The proposed visual event detection is robust to changes in scale, color, shape, occlusion, lighting conditions, view points and distances, and image compression

# Monitoring Human Behavior

<http://www.cs.ucf.edu/~vision/projects/Office/Office.html>

Copyright Mubarak Shah 2003

## Goals of the System

- Recognize human actions in a room for which **prior knowledge** is available.
- Handle multiple people
- Provide a textual description of each action
- Extract “key frames” for each action

Copyright Mubarak Shah 2003

## Possible Actions

- **Enter**
- **Leave**
- **Sitting** or **Standing**
- **Picking Up Object**
- **Put Down Object**
- .....

Copyright Mubarak Shah 2003

## Prior Knowledge

- Spatial layout of the scene:
  - Location of **entrances** and **exits**
  - Location of **objects** and some information about how they are use
- Context can then be used to improve recognition and save computation

Copyright Mubarak Shah 2003

Layout of Scene 1

Layout of Scene 2

## Layout of Scene 4

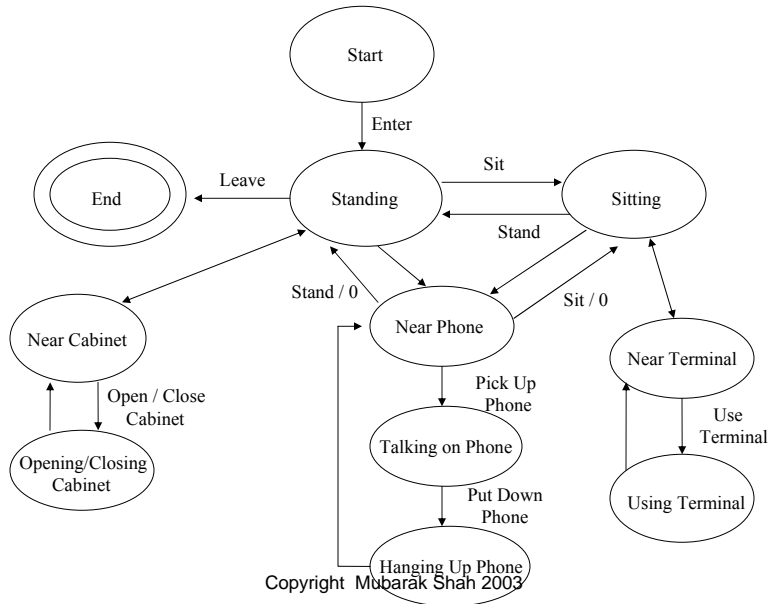

## Major Components

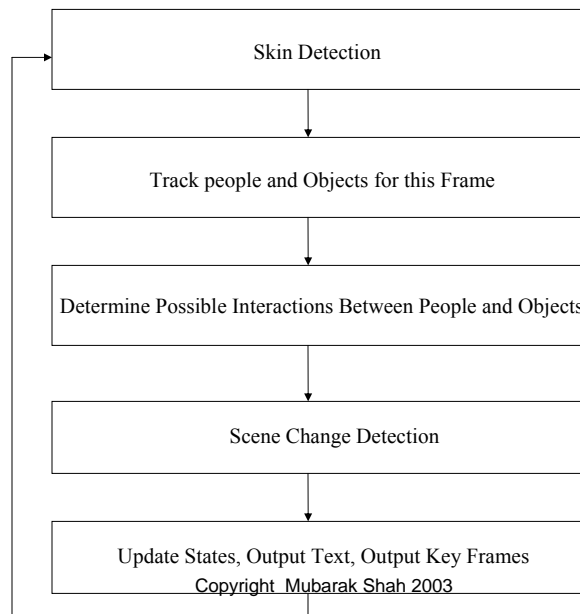

- Skin Detection
- Tracking
- Scene Change Detection
- Action Recognition

Copyright Mubarak Shah 2003

## State Model For Action Recognition

## Flow of the System

## Key Frames

- Why get key frames?
  - Key frames take less space to store
  - Key frames take less time to transmit
  - Key frames can be viewed more quickly
- We use heuristics to determine when key frames are taken
  - Some are taken before the action occurs
  - Some are taken after the action occurs

Copyright Mubarak Shah 2003

## Key Frames

- “Enter” key frames: as the person leaves the entrance/exit area
- “Leave” key frames: as the person enters the entrance/exit area
- “Standing/Sitting” key frames: after the tracking box has stopped moving up or down respectively
- “Open/Close” key frames: when the % of changed pixels stabilizes
