Papers: student/professor selected research papers

Catalog Description: 3D user interaction, spatial user interfaces, selection and manipulation, 3D navigation, system control, evaluation methodologies, augmented and mixed reality, input and output hardware

Course Objectives: 3D User Interfaces for Games and Virtual Reality is a course designed to give students a rigorous introduction to the design, implementation, and evaluation of the fundamental techniques in spatial 3D interaction.

Student Requirements:
1. Star Wars Game -- Students will create a lightsaber game where they control the saber with a Nintendo Wii controller.
2. 3D Pac-Man -- Students will create a 3D Pac-Man game where they will travel through a maze using the Nintento Wii controllers.
3. GameUI Paper -- Students will examine existing 3DUI techniques and write about how they can be incorporated into different gaming genres.
4. Paper Presentations -- Students will have to present at least one paper on a topic in 3DUIs.
5. Final Project -- Students will do a final project of their choice that explores a particular concept in 3D user interfaces tailored to video games. They must first write a short proposal and get it approved by the professor.

Tentative Grading Scheme:
Assignment 1 15%
Assignment 2 15%
Survey Paper 15%
Paper presentations 5%
Final Project 50%

The instructor reserves the right to use plus/minus grading in this course.
