Cryptography Fall 2013: Final Project
Group Project (Groups of 4)

Each group will pick a security related topic and give a presentation on the topic as well as write a final research paper on their topic.

Part I (Due Wednesday, 10/7, via email to dmarino@cs.ucf.edu)
Each group should give me document with their project topic choice and a detailed outline of what their final paper will look like. Please come and chat with me beforehand to make sure I think that the scope of your project is appropriate.

Part II (Monday, 10/21)
Each group will turn in a written progress report in class showing what has been accomplished thus far.

Part III (Wednesday, 11/13)
Each group will turn in rough draft of their final paper via email to dmarino@cs.ucf.edu. I will give general feedback for improvements I'd like to see in the final paper the following week.

Part IV (Monday, 11/18)
Each group will turn in a detailed outline of their final presentation in class. I will give feedback if I am concerned about any of the outlines. If you don't hear from me, this means that I think your outline is reasonable.

Part V(Nov 22 - 27)
Each group will make their presentation.

Part VI(Monday, 12/2)
Each group will turn in their final paper via WebCourses.

How the project will be graded
5% of the grade will come from the presentation and 10% of it will come from the paper. The checkpoints are merely there to help improve the quality of both items.
