Elliptic Curve: Adding pt to itself

$$x_R = \lambda^2 - x_P - x_Q \pmod{p}$$

$$y_R = \lambda(x_P - x_R) - y_P \pmod{p}$$

$$\lambda = \frac{y_Q - y_P}{x_Q - x_P} \pmod{p} \text{ if } P \neq Q$$

$$\Rightarrow \lambda = \frac{3x_P^2 + a}{2y_P} \pmod{p} \quad \left[\begin{array}{l} y^2 = x^3 + ax + b \\ 4a^3 + 27b^2 \not\equiv 0 \pmod{p} \end{array} \right]$$

Example

Curve = $E_{23}(1,1)$ $y^2 = (x^3 + \underset{a}{x} + \underset{b}{1}) \pmod{\underset{p}{23}}$
 $E_p(a,b)$

$P = (13, 7)$ Calculate $2P = (P+P)$

$$\lambda = \frac{3 \cdot 13^2 + 1}{2 \cdot 7} \pmod{23}$$

$$= (3 \cdot 8 + 1)(14^{-1}) \pmod{23}$$

$$\begin{aligned} 23 &= 1 \cdot 14 + 9 \\ 14 &= 1 \cdot 9 + 5 \\ 9 &= 1 \cdot 5 + 4 \\ 5 &= 1 \cdot 4 + 1 \end{aligned}$$

$$\begin{aligned} 5 - 1 \cdot 4 &= 1 \\ 5 - (9 - 5) &= 1 \\ 2 \cdot 5 - 1 \cdot 9 &= 1 \\ 2(14 - 9) - 1 \cdot 9 &= 1 \\ 2 \cdot 14 - 3 \cdot 9 &= 1 \\ 2 \cdot 14 - 3(23 - 14) &= 1 \\ 5 \cdot 14 - 3 \cdot 23 &= 1 \end{aligned}$$

$$(14^{-1} \equiv 5 \pmod{23})$$

$$\begin{array}{r} 169 \\ -115 \\ \hline 54 \\ -46 \\ \hline 8 \end{array}$$

$$\begin{aligned}
 &= (25)(5) \bmod 23 \\
 &= 2(5) \\
 &= 10
 \end{aligned}$$

11/15/19 (3)

$$\begin{aligned}
 x_R &= \lambda^2 - x_P - x_Q \quad (Q=P \text{ here}) \\
 &= 10^2 - 13 - 13 \\
 &= 100 - 26 \\
 &= 74 \bmod 23 \\
 &= \boxed{5}
 \end{aligned}$$

$$\begin{aligned}
 y_R &= (\lambda(x_P - x_R) - y_P) \bmod p \\
 &= (10(13 - 5) - 7) \bmod 23 \\
 &= (10 \times 8 - 7) \bmod 23 \\
 &= 73 \bmod 23 \\
 &= \textcircled{4} \quad (5, 4)
 \end{aligned}$$

$$P = (13, 7) \quad 2P = (5, 4)$$

Elliptic Curve DH

11/15/19 ①

Pick Curve $C(p, a, b)$
Pick generator point g } Public

Alice pick X_A calculates $0 < X_A < p$

$$\underbrace{V_A}_{pt} = \underbrace{X_A}_{num} \times \underbrace{g}_{pt} \Rightarrow \text{to Bob}$$

Bob pick X_B calculate $0 < X_B < p$

$$Y_B = X_B \times g \Rightarrow \text{to Alice}$$

Alice gets Y_B calculate is

$$\text{Key} = X_A \times Y_B = X_A \times X_B \times g$$

Bob gets Y_A calculates

$$\text{Key} = X_B \times Y_A = X_B \times X_A \times g$$
