Homework Assignment #3 (100 pts)
Due Sunday October 20, 2013

Instructor: Dr. Mark Llewellyn
markl@cs.ucf.edu
HEC 236, 407-823-2790

Department of Electrical Engineering and Computer Science
University of Central Florida
Homework Assignment #3

• This assignment has three main objectives:

(1) To give you some practice using CSS and relative positioning with floats using the nested `div` element approach.

(2) To begin to deal with more complex page layouts.

(3) To utilize the new CSS3 box-sizing property to achieve the same effect as the nested `div` element approach to complex page design.

• The four icon images that you need (HTML5, CSS, Twitter, and Identi.ca) are all available on the course web site.
HTML For Assignment #3

• For the first part of this assignment you will style an HTML5 document using relative positioning and floating elements so that the styled markup will render exactly as it appears on the next two pages. (The next page shows most of the document rendered, the following page shows the bottom portion of the rendered document.)

• You will produce a fluid layout style document. In other words, your document should resize the “columns” when the user resizes their browser window. Your layout should not “break” (experience float-slip) when this happens.

• The first part of this assignment must be done utilizing the nested `<div>` approach as covered in the notes.
Students Voice Displeasure With HTML/CSS Validators

(September 30 - CIS reporter) Many students have voiced their frustrations of using HTML and CSS validators to validate class projects in CIS 4004. Citing primarily the difficulties in understanding what the validator was trying to tell them. One student claimed "wtf does "OMITTAG NO was specified" even mean?" We spoke to the instructor of the course, Dr. Mark Llewellyn, who stated that "validation is an important part of the proper design of a modern website and understanding the output from the validators comes with experience." Dr. Llewellyn noted that currently all correct HTML5 documents would still generate one validation warning that reads "The validator checked your document with an experimental feature: HTML5 Conformance Checker. This feature has been made available for your convenience, but be aware that it may be unreliable, or not perfectly up to date with the latest development of some cutting-edge technologies. If you find any issues with this feature, please report them. Thank you." Dr. Llewellyn stated that this warning is to be expected as HTML5 is not yet technically an official standard.

News Flash!! Assignment Grades Coming Soon

(October 1 - A Special Correspondent) According to an anonymous source close to the CIS 4004 course, "grades for all completed homework assignments for CIS 4004 should be available on WebCourses now, perhaps by the time you are reading this news." Although our source did not wish to be identified in this article (his initials are MJI), we believe the information to be accurate at this time.

We do not want to see this occur in either of your pages.
Homework Assignment #3

- The second part of this assignment is to repeat the first part, but this time use the CSS3 box-sizing property to achieve your layout structure. Do not use the nested `<div>` element approach in this second part of the assignment.

- I’ve set many specific restrictions for this assignment. Be sure to follow all of them.

- As with the previous assignments, your HTML documents must validate as well as your CSS documents.

- Notice too, that the HTML5 and CSS images are somewhat fuzzy. I did not Photoshop the images they are as downloaded from W3C, I just enlarged them.
Things To Note About The Document

• The column headers and the column text are in different fonts (headers: arial, content: times new roman).

• The reporter byline uses the vrinda font and is in a different color and is smaller than the normal text (I used 9pt).

• The horizontal rules are styled (they are not the default size and color).

• The center column of text is wider than the left and right columns.

• The first event in the upcoming events “box” is bold and red.

• In the main header uses the broadway font, the “CIS 4004” is in red, and “Newsletter” is in CASTELLAR font. All are 40pt.

• You can vary the fonts if you’d like, the fonts and sizes listed above are for reference only.
CSS Restrictions For Assignment #3

- Do **not** use any inline or embedded styles for this assignment. Use **only** external style sheets. Divide your style rules into those that cover layout structure and those that cover fonts and colors into two different external stylesheets. Have each HTML document link to two external style sheets.

- Do **not** use any absolute positioning. All positioning is to be relative positioning for this assignment.

- You can pick:
  - The background color for the body of the document.
  - The background colors for the columns, noting that the center column is a different color than the left and right columns which are also slightly different colors. The Twitter/identi.ca background is also different from any other background.
  - You can style the horizontal rules in any contrasting color to your background that you would like.
What To Turn In

The deliverables for this assignment are to be submitted via WebCourses no later than 11:59pm Sunday October 20, 2013 are:

Part 1:

1. A valid HTML5 document using the nested `<div>` approach for structure. (15 pts)
2. Two valid CSS external stylesheets, one with structural styles, one for fonts, colors, etc.. (20 pts)
3. A document containing screen captures for both HTML5 validation and CSS validation (both passing!) (5 pts)
4. Two screen shots, one showing your rendered document with a browser set to full screen and one showing the browser window reduced by 25% or more (10 pts)

Part 2:

1. A valid HTML5 document that utilizes the CSS box-sizing property approach for structure. (15 pts)
2. Two valid CSS external stylesheets, one with structural styles, one for fonts, colors, etc.. (20 pts)
3. A document containing screen captures for both XHTML Strict validation and CSS validation (both passing!) (5 pts)
4. Two screen shots, one showing your rendered document with a browser set to full screen and one showing the browser window reduced by 25% or more (10 pts)
