A Three-Column Fixed-Width Layout

- A three-column fixed-width layout works in the same way as the two-column version.

- The only additional work is to add another column `<div>` element into the markup, float it like the other columns, and then share the 100% overall width among the three columns to our preference.

- I called the third column the `promo` column, although you can call it anything you’d like. The storyboard for this layout is shown on the next page.

- The main changes to the stylesheet that pertains to the layout are shown on page 4. If also added a few additional styles for the promo area in the text and colors stylesheet (see the actual files for the specific additions).
A Three-Column Fixed-Width Layout

main_wrapper

/* CSS Stylesheet for wThree Column Fixed Width Layout */
/* filename: three_column_fixed_widthCSS.css */

#main_wrapper {
    width: 840px; /* widths of columns will change proportionately as this width is changed */
    margin-left: auto; /* centers layout in browser */
    margin-right: auto; /* centers layout in browser */
    text-align: left; /* resets the centering hack for IE6 on the body tag */
}

#header {
    text-align: center;
}

#nav {
    width: 18%; /* this width + (content + promo) width must total 100% */
    float: left; /* floats on nav, content, and promo divs make them sit side by side */
}

#content {
    float: left; /* floats on nav, promo, and content divs make them sit side by side */
    width: 60%; /* this width + (nav + promo) width must total 100% */
    top: 0px;
}

#promo {
    width: 22%; /* this width + (nav + content) width must total 100% */
    float: left; /* floats on nav, content, and promo divs make them sit side by side */
}
A Three-Column Fixed Width Layout

• The only change to the markup is to include the `<div>` element for the third column and to place the desired content into the column.

• For this example, I just added some more navigation link and a couple of icons that should be familiar to you. The additional markup is shown on the next page.

• As you can see on the next page, the promo `<div>` element sits in the markup after the content `<div>` and before the footer `<div>` elements.

• All markup and CSS are on the course webpage for this layout.
</p><!-- end content_inner -->
</div> <!-- end content -->

<!-- promo -->
<div id="promo">
  <div id="promo_inner">
    <ul>
      <li><a href="#">Nav item 1</a></li>
      <li><a href="#">Nav item 2</a></li>
      <li><a href="#">Nav item 3</a></li>
    </ul>
    <img src="twitter-bird.png" height="100" width="100" alt="follow"/>
    <img src="identica-logo.png" alt="follow W3C on identi.ca" height=
    </div> <!-- end promo_inner -->
</div> <!-- end promo -->

<!-- footer -->
<div id="footer">

    </p>
  </div> <!-- end footer_inner -->
</div> <!-- end footer -->
A Three-Column Fixed Width Layout

About This Layout
This page is styled with CSS. It demonstrates a float-based three-column layout with fixed width.

The Concept
The five structural <div> elements — header, nav, content, promo and footer — nest inside a fixed width containing <div>. The three columns, nav, content and promo, are sized with percentages and are floated so they sit side by side. The footer is cleared so it sits beneath whichever of the floated columns is longest.

Auto left and right margin settings are applied to the fixed-width containing <div>, which makes the layout center in a wide browser window.

The Files
This example uses two CSS files to style the page:

1. three_column_fixed_widthCSS.css
2. text_n_colorsCSS.css

The XHTML markup file is called:

- three column fixed width layout.html

Note: Inner <div> elements inside each of the five main <div> elements allow padding and borders to be applied without affecting the width of the main structural <div> elements.
To illustrate how easy it is to achieve an entirely different presentation to the color scheme of your layout, I modified the text_n_colorsCSS file to include definitions for a different color scheme that is varying shades of blue.

Since we created the markup with the entire body of the document being styled with a single class, it means that we only need to modify a single line in our markup to achieve the effect shown on the next page.

The modified (actually, additional) CSS is shown on pages 10-12.
A Three-Column Fixed Width Layout

About This Layout
This page is styled with CSS. It demonstrates a float-based three-column layout with fixed width.

The Concept
The five structural <div> elements — header, nav, content, promo and footer — nest inside a fixed width containing <div>. The three columns, nav, content and promo, are sized with percentages and are floated so they sit side by side. The footer is cleared so it sits beneath whichever of the floated columns is longest.

Auto left and right margin settings are applied to the fixed-width containing <div>, which makes the layout center in a wide browser window.

The Files
