Client User Creation In The MySQL Workbench

- For Project 4 you need to create two new clients for the `project4` database and assign them specific privileges on the database.
- This set of slides steps you through that process using the MySQL Workbench.
- This can also be done via the MySQL command line client, however, it requires issuing specific GRANT commands and while providing finer grained privilege detail, goes a bit beyond what we need for this project.

Workbench Central

Welcome to MySQL Workbench

Planet MySQL

Start the Workbench
and select Server
Administration from
the right side of the
window.

Workspace

SQL Development

Connect to existing databases and run SQL Queries, SQL scripts, edit data and manage database objects.

Open Connection to Start Querying

Or click a DB connection to open the SQL Editor.

New Connection

Add a new database connection for querying.

Edit Table Data

Select a connection and schema table to edit.

Edit SQL Script

Open an existing SQL Script file for editing.

Manage Connections

Modify connection settings or add connections.

Data Modeling

Create and manage models, forward & reverse engineer, compare and synchronize schemas, report.

Open Existing EER Model

Or select a model to open or click here to browse.

Create New EER Model

Create a new EER Model from scratch.

Create EER Model From Existing Database

Create by connecting and reverse engineering.

Create EER Model From SQL Script

Import an existing SQL file.

Server Administration

Configure your database server, setup user accounts, browse status variables and server logs.

Server Administration

Or click to manage a database server instance.

New Server Instance

Register a new server instance to manage.

Manage Import / Export

Create a dump file or restore data from a file.

Manage Security

Manage user accounts and assign privileges.

Manage Server Instances

Add, delete and update server instance settings.

Re

To test your work, go back to the main workbench screen and open a connection to start querying, but login as client2.

Workspace

SQL Development

Connect to existing databases and run SQL Queries, SQL scripts, edit data and manage database objects.

Open Connection to Start Querying

Or click a DB connection to open the SQL Editor.

New Connection

Add a new database connection for querying.

Edit Table Data

Select a connection and schema table to edit.

Edit SQL Script

Open an existing SQL Script file for editing.

Manage Connections

Modify connection settings or add connections.

Data Modeling

Create and manage models, forward & reverse engineer, compare and synchronize schemas, report.

Open Existing EER Model

Or select a model to open or click here to browse.

Create New EER Model

Create a new EER Model from scratch.

Create EER Model From Existing Database

Create by connecting and reverse engineering.

Create EER Model From SQL Script

Import an existing SQL file.

Configure your database server, setup user accounts, browse status variables and server logs.

Server Administration

Or click to manage a database server instance.

New Server Instance

Register a new server instance to manage.

Manage Import / Export

Create a dump file or restore data from a file.

Manage Security

Manage user accounts and assign privileges.

Manage Server Instances

Add, delete and update server instance settings.
