

COP 3330 Spring 2026 Grading Criteria Program 6
Total: 20 points

Note: Max grade 5 pts out of 20 if code doesn't compile. (You can fix trivial errors like Webcourses misnaming the file or some sort of copy paste error.)

Style Points (2 pts total)

This is 100% grader discretion – award 0, 1 or 2 points based on general programming practices.

Bench class (6 pts)

1 pt – implements Comparable<Bench> in definition (note – if they call the class something different that is okay)

1 pt – has three private instance variables that are each integers

1 pt – constructor

3 pts – compareTo,, give full credit as long as it compiles and has some logic in it. (correctness will be tested separately.)

Ducksort class (2 pts)

1 pt – reading in all the input somehow

1 pt – calling Arrays.sort

Correctness (10 pts)

There are 20 test cases, 1/2 pt per test case and round down (so award an integer number of points.)
