

RP #1 - Grading Criteria

Note: The Grading Criteria for the Recitation Programs will differ significantly from the Individual Programs. Since you "know" if you got the problem correct, it's expected that only correct solutions will be submitted, for the most part. But since these programs have been specifically chosen to map to certain concepts in the class, significant points will be deducted if those concepts aren't properly used. The goal with these programs is to provide extra practice without a ton of time on the grader's end. Thus, the grading criteria will give very few points to any incorrect submission, and will deduct significant points if some key concept isn't properly displayed. For this assignment the key concept was proper dynamic memory management.

Maximum Grade for an Incorrect Submission: 20 out of 40

Grade if the two appropriate files aren't submitted (code, screensho): 0 out of 40

Maximum Grade if no dynamic memory allocation is used: 30 out of 40 (automatic 10 pt deduction)

In General, Grader's Discretion to take off 1-5 points for any poor practice.

Points for Correct Solution: 30

Points for Allocating 2d array of chars appropriately: 2 for allocating array of n points, 3 pts for dynamically allocating each string to be the right size.

Points for Freeing 2d array of chars: 3 pts for freeing each individual string, 2 pts for freeing the array.

So, if each of the n strings is size 21, then max grade is 34/40.

Grader can decide grade for incorrect submissions at their discretion (as long as max of 20 pts is awarded.)
