

Important COP 3502 Final Exam Information

Date: 4/29/2022 (FRIDAY)
Time: 10:00 AM (2.5 hours earlier than class time!!!)
Room: CB1-104

Exam Aids: Three sheets of regular 8.5"x11" paper, front and back, and the Foundation Exam Formula Sheet (provided)

Test Format:

Short Answer/Coding/Tracing/Problems

Areas of Focus: Binary Search, Backtracking, Base Conversion, Bitwise Operators, Recurrence Relations, Dynamic Memory Allocation, Recursion

Exam Archive:

www.cs.ucf.edu/~dmarino/ucf/transparency/cop3502/exam/

Archive shows types of questions I've asked in the past.

Outline of Topics for the Exam

I. Basics of C – if, loops, functions, array, strings, files

TYPE MATCHING!

II. Problem Solving on Arrays

- a. Sorted List Matching
- b. Binary Search

III. Structs, Pointers and Dynamic Arrays

- a. how to allocate space dynamically
(array, 2d array, array of struct, array of ptr to struct, linked list node, bin tree node, etc.)
- b. how to free space
- c. how to "resize" an existing array (*realloc*)
- d. how to declare structs
- e. how to use pointers to structs
- f. how to use arrays of structs
- g. how to use arrays of pointers to structs
- g. how to pass structs or pointers to structs into a function

mechanical

IV. Recursion

- a. Fibonacci
- b. Factorial
- c. Towers of Hanoi
- d. Binomial Coefficients
- e. Binary Search
- f. Fast Modular Exponentiation
- g. Floodfill
- h Brute Force (odometer, combinations)
- i. Generating Permutations

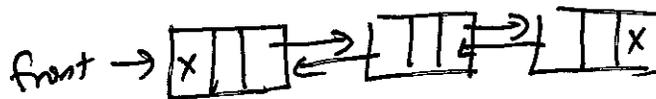

fixed structure

Other files design something

molds of code fill in blanks

V. Linked Lists

- a. Creating Nodes
- b. Checking for NULL
- c. Iterating through a list
- d. Using recursion to visit all the nodes in a list.
- e. Insertion, Searching
- f. Deletion
- g. difference between $\text{ptr} == \text{NULL}$ and $\text{ptr} \rightarrow \text{next} == \text{NULL}$
- h. Circularly linked
- i. Doubly linked

PICTURES!!!

→ Iteratively + Recursively!!!

VI. Stacks

- a. Array Implementation
- b. Dynamically Sized Array Implementation
- c. Linked List Implementation
- d. Efficiency of push, pop
- e. Determining the Value of Postfix Expressions
- f. Converting Infix to Postfix

} Implementation

} Algorithms to trace.

$O(1)$

VII. Queues

- a. Array Implementation
- b. Dynamically Sized Array Implementation
- c. Linked List Implementation
- d. Efficiency of Enqueue and Dequeue

} bit more complicated than an array

$O(1)$

↳ Note: if we only have a ptr to front, enqueue is $O(n)$.

VIII. Algorithm Analysis

- a. Average case vs. Worst case
- b. Determining a Big-Oh bound via code segment
- c. Use of sums
- d. Big-Oh timing problems
- e. Logs and exponents
- f. Recurrence Relations
- g. New problem analysis

help us

→ Almost definitely have

→ Very likely!
Iteration Technique

IX. Sorting

- a. Bubble Sort
- b. Insertion Sort
- c. Selection Sort
- d. Merge Sort
- e. Quick Sort

Usually tracing
conceptually

X. Binary Search Trees

- a. Creating Nodes
- b. Tree Traversals (preorder, inorder, postorder)
- c. Insertion
- d. Searching
- e. Deletion
- f. Code Tracing
- g. Writing Code (recursive)

→ what order
these visit
the nodes...

→ look at this!

XI. AVL Trees

- a. AVL Tree Property
- b. Identifying nodes A, B and C for both insert and delete
- c. Restructuring for both insert and delete
- d. Delete may have multiple restructures

No code
tracing

XII. Tries

- a. Basic struct
- b. Extra items to store in struct
- c. Checking for NULL
- d. Use of recursion on all 26 children
- e. Coding problems

Understand
how stored
letters aren't stored
ANYWHERE!
Value of letter is
implicit based on
array index.

- XIII. Binary Heaps**
 - a. percolateUp
 - b. percolateDown
 - c. Insert
 - d. deleteMin
 - e. makeHeap
 - f. Heap Sort

tracing
 fill in code
 tree representation
 array representation

- XIV. Hash Tables**
 - a. Properties of a good hash function
 - b. linear probing replacement technique
 - c. quadratic probing replacement technique
 - d. linear chaining hashing

tracing mostly
 almost definitely

- XV. Base Conversion and Bitwise Operators**
 - a. base conversion (2, 10, 16, other)
 - b. left shift, right shift, and, or, xor, complement
 - c. How to use a number to indicate a subset.
 - d. How to iterate through all possible subsets w/bitmask.
 - e. Use of operators for set tasks (intersection, union)
 - f. use of xor(^) in grading a T/F quiz.

single int can represent 9 booleans
 bitwise ops can do some nice functions quickly on those arrays

- XVI. Binary Search**
 - a. Problem easy to do forwards, hard to do backwards
 - b. Search function is increasing or decreasing
 - c. Simplify original version of the problem
 - d. Crystal Etching (function inversion)
 - e. ~~Careful Approach (feasibility check)~~ Airport Shuttle

- XVII. Backtracking**
 - a. Use in Eight Queens Problem ,
 - b. ~~Idea for Sudoku Solving~~ Digit Divisibility, Kattis Problem (Geppetto)
 - c. Trying all possibilities and stopping if a path is doomed to fail.

key difference w/ straight brute force.
