

### **RP #3 - Grading Criteria**

**Note:** The Grading Criteria for the Recitation Programs will differ significantly from the Individual Programs. Since you "know" if you got the problem correct, it's expected that only correct solutions will be submitted. But since these programs have been specifically chosen to map to certain concepts in the class, significant points will be deducted if those concepts aren't properly used. The goal with these programs is to provide extra practice without a ton of time on the grader's end. Thus, the grading criteria will give very few points to any incorrect submission, and will deduct significant points if some key concept isn't properly displayed. For this assignment the key concept was using the permutation algorithm, which was reinforced during the backtracking portion of the course.

**Maximum Grade for an Incorrect/TLE Submission:** 10 out of 30

**Grade if the code and screenshot aren't submitted (code, screenshot):** 0 out of 30

**Grade for correct code and screen shot combo:** 20 out of 30 (Include 5 style points here)

**Grade for intuitive proof:** 10 points

**In General, Grader's Discretion to take off 1-5 points for any poor practice.**

**Proof guidelines will be given separately, since this file is being posted before the assignment is due.**
