pseudo code

Run-time find $O(h)$, h = tallest trees

Issue: if we always choose 1 way, we could get unlucky before find

find(8) → find(2) → find(6) → find(4) → find(3) → 3

int find(int u) {

if (par[u] == u) return u;

return par[u] = find(par[u]);

Artwork

Kattis id: artwork

Draw brushstroke - breaks apart white regions
opposite of what a DJ set does

(imagine "unpainting" (going backward))

If 2 sq adj white

$\text{DJSet.union}(0,1)$

$\text{union}(1,2)$

Problem Solving Idea: If going forwards you
split stuff, read everything in, then simulate
backwards and you'll be unioning things!
(With a DJ Set :))
