COP 4710: Database Systems (SQL Exercises)

Page 1

SQL In Class Exercises

• Use the following database scheme for the problems in this exercise.

Suppliers (S)

• Develop SQL expressions for each of the following queries:

COP 4710: Database Systems (SQL Exercises)

1. List only the names of those suppliers who ship a part that weighs more than 200.

Solutions

SELECT sname

FROM suppliers NATURAL JOIN shipments CROSS JOIN parts

WHERE weight > 200 AND shipments.pnum = parts.pnum;

Note that a second natural join won't work here since the join would also occur on the city attribute, which would be a more restrictive query.

WRONG

SELECT sname

FROM suppliers NATURAL JOIN shipments NATURAL JOIN parts

WHERE weight > 200 AND shipments.pnum = parts.pnum;

- or -

SELECT sname

FROM suppliers

WHERE snum IN (SELECT snum

FROM shipments

WHERE pnum IN (SELECT pnum

FROM parts

WHERE weight > 200)));

COP 4710: Database Systems (SQL Exercises)

Page 3

1. List only the names of those suppliers who ship a part that weighs more than 200.

Solutions

Relational Algebra Version

$$\pi_{name}\left(\text{suppliers} \triangleright \triangleleft \left(\text{shipments} \triangleright \triangleleft \left(\pi_{pnum}\left(\sigma_{weight>200}\left(\text{parts}\right)\right)\right)\right)\right)$$

Tuple Calculus Version

{ t.name | t \in suppliers AND \exists u (u \in shipments AND u.snum = t.snum AND \exists v(v \in parts AND v.pnum=u.pnum AND v.weight > 200)) }

© Dr. Mark Llewellyn

COP 4710: Database Systems (SQL Exercises)

2. List the names of those cities in which both a supplier and a job are located.

Solutions

- or -SELECT supplier.city FROM suppliers NATURAL JOIN jobs; SELECT supplier.city FROM suppliers JOIN jobs WHERE suppliers.city = jobs.city;

- or -

SELECT supplier.city FROM suppliers - or -WHERE city IN (SELECT city FROM jobs);

SELECT supplier.city FROM suppliers, jobs WHERE suppliers.city = jobs.city;

© Dr. Mark Llewellyn

COP 4710: Database Systems (SQL Exercises)

2. List the names of those cities in which both a supplier and a job are located.

Solutions

Relational Algebra Version

$$\left[\pi_{city}(\text{suppliers})\right] \cap \left[\pi_{city}(\text{jobs})\right]$$

Tuple Calculus Version

{r.city | $r \in suppliers AND \exists t (t \in jobs AND r.city = t.city)$ }

© Dr. Mark Llewellyn

COP 4710: Database Systems (SQL Exercises)

3. List the names of those jobs that receive a shipment from supplier number S1.

- or -

Solutions

SELECT jname

FROM jobs

WHERE jnum IN (SELECT jnum

FROM shipments

WHERE snum = "S1");

WRONG

SELECT jname FROM jobs WHERE jnum = (SELECT jnum FROM shipments WHERE snum = "S1");

- or -

SELECT jname FROM jobs NATURAL JOIN shipments WHERE snum = "S1"; SELECT jname FROM jobs, shipments WHERE snum = "S1" AND jobs.jnum = shipments.jnum;

COP 4710: Database Systems (SQL Exercises)

3. List the names of those jobs that receive a shipment from supplier number S1.

Solutions

Relational Algebra Version

$$\pi_{name} \left(\text{jobs} \triangleright \triangleleft \left(\pi_{jnum} \left(\sigma_{snum="S1"} \left(\text{shipments} \right) \right) \right) \right)$$

Tuple Calculus Version

{t.name | $t \in jobs AND \exists r (r \in shipments AND r.jnum = t.jnum AND r.snum = "S1") }$

4. List the names of those parts that are not shipped to any job.

Solutions

SELECT pname FROM parts WHERE pnum NOT IN (SELECT pnum FROM shipments);

- or -

SELECT pname

FROM parts

WHERE NOT EXISTS (SELECT *

FROM shipments

WHERE shipments.pnum = parts.pnum);

COP 4710: Database Systems (SQL Exercises)

4. List the names of those parts that are not shipped to any job.

Solutions

Relational Algebra Version

$$(\pi_{pnum}(\text{parts})) - (\pi_{pnum}(\text{shipments}))$$

Tuple Calculus Version

{t.pnum | $t \in parts AND NOT \exists r (r \in shipments AND r.pnum = t.pnum) }$

5. List the names of those suppliers who ship part number P2 to any job.

Solutions

SELECT sname

FROM suppliers

WHERE snum IN (SELECT snum

FROM shipments

WHERE pnum = "P2");

- or -

SELECT sname FROM suppliers NATURAL JOIN shipments WHERE pnum = "P2";

© Dr. Mark Llewellyn

COP 4710: Database Systems (SQL Exercises)

5. List the names of those suppliers who ship part number P2 to any job.

Solutions

Relational Algebra Version

$$\pi_{name}$$
 (suppliers $\triangleright \triangleleft (\sigma_{pnum="P2"}(\text{shipments})))$

Tuple Calculus Version

{t.name | $t \in supliers AND \exists r (r \in shipments and r.snum = t.snum AND r.pnum = "P2")}$

COP 4710: Database Systems (SQL Exercises)

List the names of those suppliers who do not ship part number 6. P2 to any job.

Solutions

- or -

SELECT sname FROM suppliers WHERE snum NOT IN (SELECT snum FROM shipments WHERE pnum = "P2");

SELECT sname

FROM suppliers

WHERE NOT EXISTS (SELECT *

FROM shipments

Note that neither of the following are correct!

SELECT sname **FROM** suppliers WHERE snum = (SELECT snum **FROM** shipments WHERE pnum \neq "P2");

-or-

SELECT sname

FROM suppliers

WHERE snum IN (SELECT snum

FROM shipments

WHERE snum \neq "P2");

WHERE shipments.snum = suppliers.snum AND shipments.pnum = "P2");

COP 4710: Database Systems (SQL Exercises)

Page 13

6. List the names of those suppliers who do not ship part number P2 to any job.

Solutions

Relational Algebra Version

$$\pi_{name}\left(\text{suppliers} \triangleright \triangleleft \left[\left(\pi_{snum}\left(\text{suppliers}\right)\right) - \left(\pi_{snum}\left(\sigma_{pnum="P2"}\left(\text{shipments}\right)\right)\right)\right]\right)$$

Tuple Calculus Version

{t.name | $t \in supliers AND NOT \exists r (r \in shipments and r.snum = t.snum AND r.pnum = "P2")}$

© Dr. Mark Llewellyn

COP 4710: Database Systems (SQL Exercises)

7. List the names of those suppliers who ship part at least one red part to any job.

Solutions

SELECT sname

FROM suppliers

WHERE snum IN (SELECT snum

FROM shipments

WHERE pnum IN (SELECT pnum

FROM parts

WHERE color = "red"));

- or -

SELECT sname

FROM suppliers NATURAL JOIN shipments

WHERE pnum IN (SELECT pnum

FROM parts

WHERE color = "red");

COP 4710: Database Systems (SQL Exercises)

Page 15

7. List the names of those suppliers who ship part at least one red part to any job.

Solutions

Relational Algebra Version

$$\pi_{name}\left(\text{suppliers} \triangleright \triangleleft \left(\pi_{snum}\left(\text{shipments} \triangleright \triangleleft \left(\sigma_{color="red"}\left(\text{parts}\right)\right)\right)\right)\right)$$

Tuple Calculus Version

 $\label{eq:constraint} \begin{array}{l} \{t.name \mid t \in \text{suppliers AND } \exists r \ (\ r \in \text{shipments AND } r.snum = t.snum \ \text{AND } \exists u \ (\ u \in \text{parts } AND \ u.color = "red" \ \text{AND } u.pnum = r.pnum) \) \end{array} \right\}$

COP 4710: Database Systems (SQL Exercises)

Page 16

8. List the part number for every part that is shipped more than once (the part must be shipped more than one time).

Solution

SELECT pnum FROM shipments GROUP BY pnum HAVING COUNT (snum) > 1; WHERE clause restricts by rows HAVING clause restricts by groups

Relational Algebra Version Tuple Calculus Version Since this query is expressed using an aggregate operation (you need to count tuples), this query is not expressible in either relational algebra nor tuple calculus.

COP 4710: Database Systems (SQL Exercises)

8A. List the part number for every part that is shipped by more than one supplier (the part must be shipped by different suppliers).

Solution

SELECT pnum

FROM shipments

GROUP BY pnum

HAVING COUNT (DISTINCT snum) > 1;

This ensures that the same supplier would appear only once, since DISTINCT is applied first, the count will look only at unique snums

Relational Algebra Version

Tuple Calculus Version

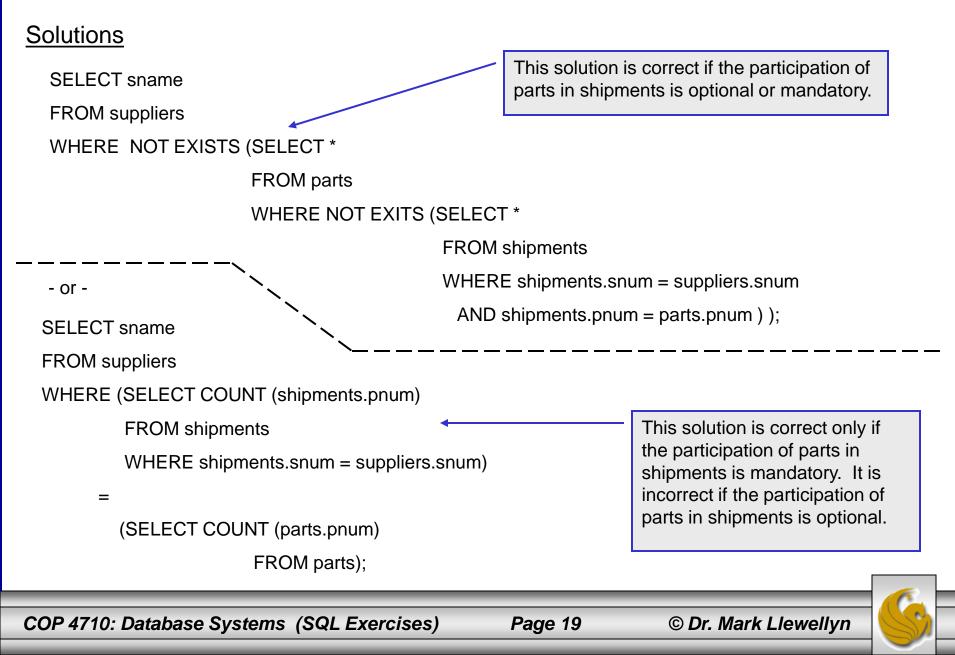

Since this query is expressed using an aggregate operation (you need to count tuples), this query is not expressible in either relational algebra nor tuple calculus.

COP 4710: Database Systems (SQL Exercises)

Page 18

9. List the names of those suppliers who ship every part.

9. List the names of those suppliers who ship every part. <u>Solutions</u>

Relational Algebra Version

$$\pi_{name}\left(\text{suppliers} \triangleright \triangleleft \left[\left(\pi_{snum, pnum}\left(\text{shipments}\right)\right) \div \left(\pi_{pnum}\left(\text{parts}\right)\right)\right]\right)$$

Tuple Calculus Version

 $\label{eq:constraint} \begin{array}{l} \{t.name \mid t \in \text{suppliers AND } \forall u \ (\ u \in \text{parts AND } \exists \ r \ (\ r \in \text{shipments AND } u.\text{pnum} = r.\text{pnum AND} \\ r.\text{snum} = t.\text{snum}) \) \end{array} \right\}$

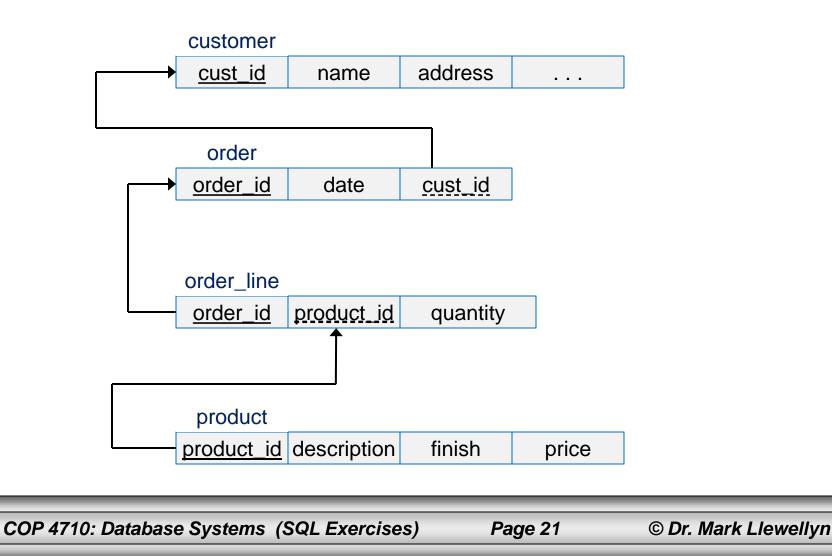

COP 4710: Database Systems (SQL Exercises)

Page 20

SQL In Class Exercises

• For the remainder of the problems use the following database schema. I did only SQL expressions for the remaining examples.

10. List the date of every order placed by customer 5.

Solutions

SELECT date

FROM order

WHERE cust_id = 5;

- or -

SELECT DISTINCT date FROM order WHERE cust_id = 5;

© Dr. Mark Llewellyn

COP 4710: Database Systems (SQL Exercises)

11. List all the cities from which a customer placed an order on March 11th.

Solutions

SELECT DISTINCT city

FROM customer NATURAL JOIN order

WHERE date = "March 11";

- or -

SELECT DISTINCT city FROM customer WHERE cust_id IN (SELECT cust_id FROM order

WHERE date = "March 11");

COP 4710: Database Systems (SQL Exercises)

12. List the dates for every order placed that included part number 6.

Solutions

SELECT DISTINCT date

FROM order NATURAL JOIN order_line

WHERE product_id = 6;

- or -

SELECT DISTINCT date FROM order WHERE order_id IN (SELECT order_id FROM order_line

WHERE product_id = 6);

© Dr. Mark Llewellyn

COP 4710: Database Systems (SQL Exercises)

13. List the names of those customers who have not placed any orders.

Solution

SELECT name FROM customer WHERE cust_id NOT IN (SELECT cust_id

FROM order);

© Dr. Mark Llewellyn

COP 4710: Database Systems (SQL Exercises)

14. List the names of those customers who have never ordered part number 6.

Solution

SELECT DISTINCT name

FROM customer

WHERE cust_id NOT IN (SELECT cust_id

FROM order

WHERE order_id IN (SELECT order_id

FROM order_line

WHERE product_id = 6)

);

© Dr. Mark Llewellyn

COP 4710: Database Systems (SQL Exercises)

15. List the names of those customers who have ordered both part number 5 and part number 6.

Solution SELECT DISTINCT name

FROM customer

WHERE (cust_id IN (SELECT cust_id

FROM order

WHERE order_id IN (SELECT order_id

FROM order_line

WHERE product_id = 5))

)

AND

(cust_id IN (SELECT cust_id

FROM order

WHERE order_id IN (SELECT order_id

FROM order_line

WHERE product_id = 6))

COP 4710: Database Systems (SQL Exercises)

);

Page 27

16. List the names of those customers who have ordered part number 5 and not ordered part number 6.

Solution SELECT DISTINCT name

FROM customer

WHERE (cust_id IN (SELECT cust_id

FROM order

WHERE order_id IN (SELECT order_id

FROM order_line

WHERE product_id = 5))

)

AND

(cust_id NOT IN (SELECT cust_id

FROM order

WHERE order_id IN (SELECT order_id

FROM order_line

WHERE product_id = 6))

COP 4710: Database Systems (SQL Exercises)

);

Page 28

17. List the names of those customers who have ordered either part number 5 or part number 6.

Solution

SELECT DISTINCT name FROM customer WHERE cust_id IN (SELECT cust_id FROM order WHERE order_id IN (SELECT order_id FROM order_line WHERE product_id = 5 OR product_id = 6));

© Dr. Mark Llewellyn

COP 4710: Database Systems (SQL Exercises)

18. List the names of those customers who have ordered only part number 6.

Solution

FROM customer

SELECT DISTINCT name

WHERE (cust_id IN (SELECT cust_id

FROM order

WHERE order_id IN (SELECT order_id

FROM order_line

WHERE product_id = 6))

)

AND

(cust_id NOT IN (SELECT cust_id

FROM order

WHERE order_id IN (SELECT order_id

FROM order_line

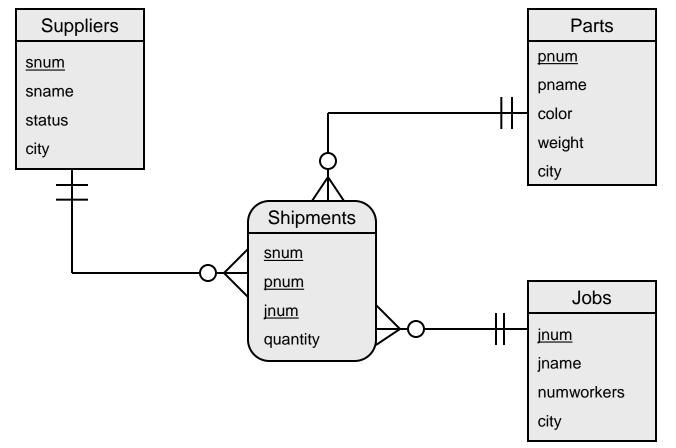

WHERE product_id <> 6))

);

SQL In Class Exercises

• Use the following database scheme for problems 19-30 in this exercise.

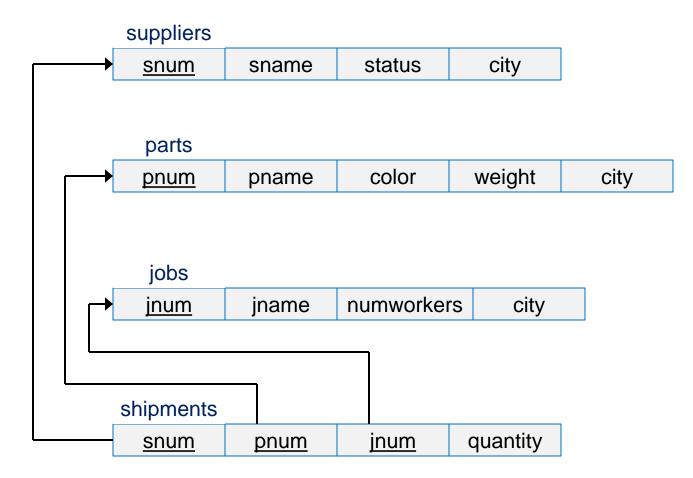

• Develop SQL expressions for each of the following queries:

SQL In Class Exercises

• The schema version of the database for problems 19-30.

19. Create the table definition for the suppliers schema. Do not allow a supplier's information to be deleted if they have a shipment.

Solution

CREATE TABLE suppliers

(snum VARCHAR2(5) NOT NULL,

```
sname VARCHAR2(25),
```

status INTEGER,

city VARCHAR2(20),

CONSTRAINT supplier_PK PRIMARY KEY (snum)

ON UPDATE RESTRICT);

COP 4710: Database Systems (SQL Exercises)

20. Assuming that the tables for the parts and jobs were created in a similar fashion to that of the suppliers table on the previous page, create the table definition for the shipments schema.

Solution

CREATE TABLE shipments

(snum VARCHAR2(5) NOT NULL,

pnum VARCHAR2(5) NOT NULL,

jnum VARCHAR2(5) NOT NULL,

quantity INTEGER,

CONSTRAINT ship_PK PRIMARY KEY (snum, pnum, jnum),

CONSTRAINT ship_FK1 FOREIGN KEY (snum) REFERENCES suppliers(snum),

CONSTRAINT ship_FK2 FOREIGN KEY (pnum) REFERENCES parts(pnum),

CONSTRAINT ship_FK3 FOREIGN KEY (jnum) REFERENCES jobs(jnum));

21. Insert a new supplier's information into the suppliers table.

<u>Solution</u>

INSERT INTO suppliers VALUES
("S1","Kristy",14,"Orlando);

© Dr. Mark Llewellyn

COP 4710: Database Systems (SQL Exercises)

22. Delete from the shipment table every row where the quantity is less than 10.

Solution

DELETE FROM shipments WHERE quantity < 10;

© Dr. Mark Llewellyn

COP 4710: Database Systems (SQL Exercises)

23. Update the suppliers table by modifying the status of every supplier whose current status is 10 by increasing the status by 5.

<u>Solution</u>

UPDATE suppliers SET status = status + 5 WHERE status = 10;

© Dr. Mark Llewellyn

COP 4710: Database Systems (SQL Exercises)

24. Update the parts table by modifying the weight of part number 6 to its current weight + 20.

Solution

UPDATE parts SET weight = weight + 20 WHERE pnum = 6;

© Dr. Mark Llewellyn

COP 4710: Database Systems (SQL Exercises)

25. Modify the data in the parts table so that every part that was blue is now colored green.

<u>Solution</u>

UPDATE parts SET color = "green" WHERE color = "blue";

© Dr. Mark Llewellyn

COP 4710: Database Systems (SQL Exercises)

26. List only the names of those suppliers who are located in Orlando.

Solution

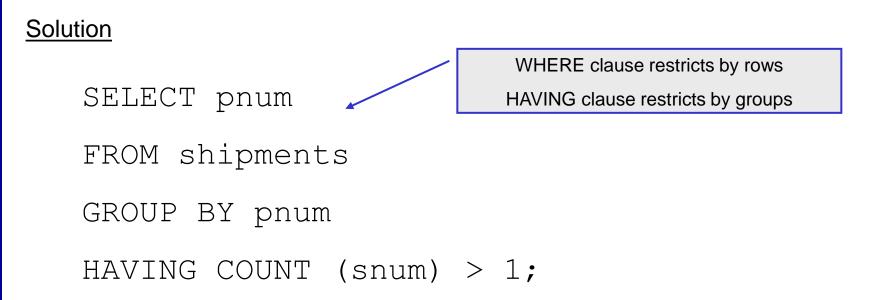

SELECT sname
FROM suppliers
WHERE city = "Orlando";

© Dr. Mark Llewellyn

COP 4710: Database Systems (SQL Exercises)

27. List the part number for every part that is shipped by more than one supplier.

COP 4710: Database Systems (SQL Exercises)

28. Find the average weight of all parts.

Solution

SELECT AVG (weight)

FROM parts;

COP 4710: Database Systems (SQL Exercises)

Page 42

29. For each part list the part number and the total quantity in which that part is shipped and order the results in descending order of the total quantity shipped. Name the total quantity shipped in the result as totalShipped.

Solution

SELECT pnum, SUM(quantity) AS totalShipped FROM shipments GROUP BY pnum

ORDER BY SUM(quantity) DESC;

COP 4710: Database Systems (SQL Exercises)

Page 43

30. List the supplier number and the total quantity of parts that supplier ships and group the results by supplier number in descending order of the total quantity supplied.

Solution

SELECT snum, SUM(shipments.quantity)

AS totalShipped

FROM shipments

GROUP BY snum

ORDER BY sum (quantity) DESC;

COP 4710: Database Systems (SQL Exercises)
