Assignment # 9.1a Key

Use quantification of an algorithmic predicate to estimate the complexity (decidable, re, co-re, non-re) of each of the following, (a)-(d):

```
a)REPEATS = { f | for some x and y, x \neq y, f(x)\downarrow, f(y)\downarrow and f(x) == f(y) }
```

```
\exists <x,y,t>[STP(f,x,t) & STP(f,y,t) & (x\neq y) & (VALUE(f,x,t) = (VALUE(f,y,t))
RE
```

Assignment # 9.1b Key

b) DOUBLES = { f | for all x, $f(x) \downarrow$, $f(x+1) \downarrow$ and f(x+1)=2*f(x) }

 $\forall x \exists t [STP(f,x,t) \& STP(f,x+1,t) \& (2*VALUE(f,x,t) = (VALUE(f,x+1,t))]$ Non-RE, Non-Co-RE

Assignment # 9.1c Key

c) DIVEVEN = $\{f \mid \text{for all } x, f(2*x) \uparrow \}$

```
∀<x,t> [~STP(f,2*x,t)]
Co-RE
```

Assignment # 9.1d Key

d) QUICK10={ f | f(x), for all $0 \le x \le 9$, converges in at most x+10 steps }

STP(f,0,10) & STP(f,1,11) & ... & STP(f,9,19)

or

 $\forall x_{0 \le x \le 9}$ [STP(f,x,x+10)]

REC

Assignment # 9.21 Key

- 1. Let sets A be recursive (decidable) and B be re non-recursive (undecidable).
 - Consider $C = \{ z \mid min(x,y), where x \in A \text{ and } y \in B \}$. For (a)-(c), either show sets A and B with the specified property or demonstrate that this property cannot hold.
- a) Can C be recursive?

YES. Consider $A = \{0\}$. B = Halt. $C = \{0\}$

Assignment # 9.2b Key

b) Can C be non-recursive?

YES. Consider $A = \{ 2x \mid x \in N \}$. $B = \{ 2x+1 \mid x \in Halt \}$. $C = A \cup B$. This is semi-decidable but non re as Halt is reducible to C.

Assignment # 9.2c Key

c) Can C be non-re?

No. Can enumerate C as follows.

First if A is empty then C is empty and so RE by definition.

If A is non-empty then A is enumerated by some algorithm f_A as recursive sets are RE.

As B is non-recursive RE, then it is non-empty and enumerated by some algorithm $f_{\rm B}$.

Define f_C by $f_C(\langle x,y \rangle) = \min(f_A(x),f_B(y))$. f_C is clearly an algorithm as it is the composition of algorithms. The range of f_C is then $\{z \mid \min(x,y), \text{ where } x \in A \text{ and } y \in B \} = C \text{ and so } C \text{ must be RE.}$
