

GRAPH THEORY PROBLEMS

UNDIRECTED ACYCLIC GRAPHS

1. COLORING PROBLEM

2. INDEPENDENT SET PROBLEM

3. VERTEX COVERING PROBLEM
(REALLY ABOUT EDGES)

VERTEX COVERING

CHOOSE SET OF VERTICES SUCH THAT
EVERY EDGE HAS AN ASSOCIATED
SELECTED VERTEX

OPTIMIZATION VERSION

WHAT IS MINIMUM SIZE SET?

DECISION PROBLEM

GIVEN $k > 0$, CAN THE GRAPH BE
COVERED BY k VERTICES

CAN SOLVE OPTIMIZATION IN POLY
TIME IF CAN SOLVE DECISION IN POLY

TRY $1, 2, \dots, n = \# \text{ VERTICES}$

NOTE: n ALWAYS WORKS

VC $K=4$

A, B, F, D COVERS

OR

E, B, F, D COVERS

INDEPENDENT SET

CHOOSE SET OF VERTICES
SUCH THAT NO TWO VERTICES
HAVE COMMON EDGE (ARE CONNECTED)

OPTIMIZATION VERSION

WHAT IS MAXIMUM SIZE SET?

DECISION PROBLEM

GIVEN $R > 0$, CAN THE GRAPH ~~BE~~
HAVE AN INDEPENDENT SET OF
SIZE R

CAN SOLVE OPTIMIZATION IN POLYTIME

IF CAN SOLVE DECISION IN POLY

TRY $n, n-1, \dots, 1$ ~~#~~ $N = \#$ VERTICES

NOTE! 1 ALWAYS WORKS

IS $k=4$

A G C H is IS

OR
E G C H is IS

GRAPH COLORING

COLOR EACH VERTEX SO NO
NEIGHBOR VERTEX HAS SAME
COLOR

OPTIMIZATION

WHAT IS MINIMUM # OF COLORS

DECISION

GIVEN $k > 0$, CAN WE COLOR
WITH k COLORS

CAN SOLVE OPTIMIZATION IN POLY

IF DECISION SOLVABLE IN POLY

TRY $1, 2, \dots, n = \# \text{ VERTICES}$

n ALWAYS WORKS

4 ALWAYS WORKS IF PLANAR
(NO CROSSING EDGES)

GC $h=3$

ABOVE IS ONE OF MANY 3-COLOR
SOLUTIONS
