OVERVIEW OF RESEARCH IN COMPUTER SCIENCE AT UCF

Research in Computer Science spans a wide range of topics. At UCF research in Computer Science emphasizes:

- Innovative uses for computation (including new applications, algorithms, protocols, and tools),
- Studies of issues surrounding computation (including security, theory, human-computer interaction, and insights into the design, programming and verification of programs and systems), and
- Investigations into the nature of computation (including questions such as: what is intelligence, and what are different ways to compute?).

Typically, writing a computer program is not considered worthy of a research publication, unless the program is being used to demonstrate some new tool, programming technique, or has some other purpose driven by the kinds of Computer Science questions described above. Thus, while we are eager to partner with others in research, our potential research partners need to be aware that computer science research is not the same as programming.

Our faculty have won many awards (such as best paper awards at conferences) and have been recognized by various professional societies. We have on our faculty 5 Fellows of the IEEE, 1 ACM Fellow (retired), 1 IAPR Fellow, 1 SPIE Fellow, and 2 Fellows of the AAAS. Our faculty also includes 5 NSF CAREER award winners, 3 AFOSR Young Investigator award winners, and 2 DARPA CS Study Group award winners.

In what follows we give a brief overview of the main research areas in Computer Science at UCF.

**Computer Vision** addresses the problem of how to use computers to process visual information, including pictures and videos. Specific problems include detection and recognition of objects, features, or actions, segmentation of videos, and using image or video data in computational processes. Drs. Bagci, Borji, Foroosh, Gong, da Vitoria Lobo, Shah and Welch work in this area.

**Image and Video Processing** addresses the problems of acquisition, storage, retrieval, and processing of images, videos, and high dimensional signals for extraction and analysis of useful information for human users, robots, and autonomous systems. Specific problems include design and analysis of imaging sensors, high-dimensional signal representation and transformation, compression methods, image/video retrieval, 3D sensing and modeling, medical imaging, space imaging, and live video computing. Drs. Bagci, Foroosh, Gong, and Hua work in this area.

**Virtual Reality (VR)** is a multidisciplinary area of research aimed at interactive computer-mediated immersive simulations of environments or experiences typically involving sight, sound, and touch. Simulations involving a blending of real and virtual objects is often referred to as Augmented Reality (AR). Research in VR/AR encompasses a wide range of fundamental topics, including computer graphics, multi-modal systems (e.g., displays, tracking, haptics, robotics), 3D interaction, illusions of presence/tele-presence, and human factors. One of our current foci is on human-centered experiences involving avatars and virtual humans for training teachers, healthcare practitioners, and military personnel.

**Human Computer Interaction (HCI)** is the scientific study how humanity communicates with all aspects of computing technology. HCI is an interdisciplinary field that spans computer science, computer engineering, psychology, human factors, and cognitive science. In our department, we focus specifically on developing and evaluating interactive systems that help to improve people's lives when using computer-based environments. We focus on improving the user experience in application areas such as education, entertainment, medicine, robotics, and general work productivity. Drs. Gonzalez, Hughes, LaViola, Welch, and Wisniewski work in these areas.

**Artificial Intelligence (AI)** seeks to understand the fundamental nature of intelligence and how to make computers exhibit intelligent behavior. **Machine Learning** addresses the problem of how to automatically learn concepts and behaviors from data. With seven faculty in AI and machine learning, UCF CS is highly active in these areas. Major research strengths include complex systems, data mining, diagnostics, evolutionary computation, intelligent simulation, knowledge

**Computer Graphics** addresses the problem of how to produce images of objects from their mathematical descriptions using computers. Examples of specific research foci include how to render realistic looking objects, how to animate such objects, and how to use rendering and animation for simulation and interactive training including Virtual Reality and Augmented Reality. Some of our work involves computer vision/image processing, for example interactive view synthesis and Spatial Augmented Reality. Drs. Hughes, Pattanaik, and Welch work in this area.

**Software Engineering** addresses the problem of how to produce quality software on time and within a specific budget. **Systems** work addresses the problem of how to build large computer systems that accomplish some specific purpose. Specific research problems in Software Engineering that we are investigating include: how best to describe what software systems are supposed to do (specification), how to ensure that computational systems behave correctly (verification), model checking of software and hardware systems with a particular emphasis on scalable formal verification of cyber-physical systems and quantitative computational models, how to parallelize systems for maximum efficiency, how to model, analyze, and optimize the performance of software, and how to build large, concurrent and distributed systems. Drs. Dechev, Hua, Jha, Leavens, Marinescu, Orooji, Turgut, and Wang work in these areas.

**Database** research addresses the problem of storage and retrieval of data. Information must be stored in a fashion that allows both efficient and convenient retrieval by people and applications. Specific problems addressed in research at UCF include techniques for parallel and distributed processing of very large data sets, database management as a service, moving object databases for mobile computing, querying multimedia databases that may include online cameras as a special class of storage devices, database management in the Internet of Things, and data privacy and security. Drs. Bassiouni, Hua, Llewellyn, Orooji, Qi, and Zou work in this area.

**Parallel Computation** deals with the theory and practice of organizing computations to run faster on machines with several processors. Different models of parallelism are studied along with parallelizability of various problems. Practical aspects involve designing parallel algorithms and data structures to solve compute-intensive problems on rapidly-evolving platforms with massive parallelism, fast and efficiently. A key challenge for creating and adapting parallel software applications is the high architectural complexity of HPC systems in terms of their degree of concurrency and heterogeneity, sensitivity to communications and data movement, and requirements for locality. Enabling effective large-scale multiprocessor computing will have an impact that crosses multiple areas of science. There are still many barriers involved in building efficient HPC software applications and hardware platforms. Research at UCF aims to provide the fundamental tools and techniques for understanding how to design applications and algorithms for the rapidly evolving massively parallel chip architectures. Drs. Dechev, Hua, Jha, Marinescu, and Wang work in this area.

**Networking and Mobile Computing** is concerned with designing efficient communications protocols and architectures for exchanging data among computers and mobile devices. The scientific results of the field enable a wide range of networked applications and enhance the real-world experience of network and mobile users. Research areas investigated by our faculty include but are not limited to resource management techniques in ad hoc, cellular, and cognitive radio networks, challenging topics in sensor networks such as intruder tracking, underwater sensors and maximizing value of information, intelligent sharing of wired and wireless bandwidth, and real-time transmission of audio and video over wireless networks/Internet. Drs. Bassiouni, Chatterjee, Fu, Hua, Mohaisen, and Turgut work in this area.

**Computer Security** is concerned with designing mechanisms for protecting computers and networks from attacks, keeping information confidential and safe from tampering, preventing unauthorized access to resources, and providing robust security to various applications including e-commerce transactions. Research areas investigated by our faculty include but are not limited to Intrusion Prevention and Detection, Malware Propagation Modeling and Analysis, Security of Wireless Networks, Sensor Networks and Vehicular Ad hoc Networks, Authentication Protocols, and Cloud Security. **Digital Forensics** addresses the problem of recovering evidence (e.g., to be used in court) from computers, mobile devices, or any
storage media that may hold data in binary form. Drs. Bassiouni, Fu, Jha, Leavens, Mohaisen, Wocjan, and Zou work in these areas.

**Bioinformatics** is an interdisciplinary field to study various biological problems using advanced computational and statistical methods. With large-scale high-throughput biological data rapidly accumulated, this fast-growing field has become an indispensable part to biology research, also an important avenue for computer scientists to study biological problems. Bioinformatics research at UCF CS focuses on the following several areas: computational genomics, metagenomics, non-coding RNA and RNA genomics, systems biology to model gene protein interactions and gene regulation, and machine learning and data mining algorithms to integrate massive biological data and networks. Computational systems biology is the new and upcoming inter-disciplinary science that combines approaches from dynamical systems, control theory, formal methods, and process algebra to study the complex interactions within and among biological systems. Building on the existing success of bioinformatics and bio-imaging research, computational **systems biology** constructs mathematical and computational models so as to facilitate a holistic understanding of biological systems; hence, it differs fundamentally from the reductionist view of traditional studies in life sciences. Together with partners from medical schools and national laboratories, we are studying translational computational systems biology with applications in drug design, metabolic networks, clinical-decision making, and the design of verified biomedical cyber-physical systems. Drs. Hu, Jha, Thankachan, Yooseph, Shaojie Zhang, and Wei Zhang work in these areas.

**Theory of Computing** addresses the problem of understanding the fundamental nature and limits of computation. Algorithms addresses the problem of how to best solve specific problems using minimal time and space resources. **Quantum Computing** addresses the problem of how to compute using quantum mechanical phenomenon, such as photons. Specific problems in the Theory of Computing include how to classify problems as to their degree of difficulty. Specific problems in Algorithms include finding (optimal) algorithms for computing problems, and proving that a given problem requires a certain minimum amount of resources for its solution. Specific problems in Quantum Computing include finding algorithms for solving problems efficiently using quantum information. Drs. Deo, Hughes, Marinescu, Thankachan, Wocjan, and Shaojie Zhang work in these areas.

**Computer architecture** research focuses on designing computer systems optimized for high performance, energy efficiency, and scalability or some combination thereof. This research may focus on many aspects of computer systems including the design of processors, memory systems, GPUs, mobile and embedded devices, big data I/O systems, networks, and large-scale parallel machines. Specific problems include the hardware/software co-design of energy efficient architectures for heterogeneous multicore processors and understanding the interaction of file systems and parallel I/O systems in big data applications and its implications for modern file system design. Dr. Heinrich works in this area.

Research
http://www.cs.ucf.edu/~bagci

- Medical Image Computing and Biomedical Imaging
- Deep Learning for Radiology Imaging
- Pattern Recognition for Molecular Imaging
- Computer Vision / Image Processing
- Machine Learning for Social Sciences

Other Experience
- Staff Scientist and Lab Manager, NIH.
- Visiting Fellow, University of Pennsylvania.
- Co-Founder, DGMed Inc.

Professional Activities
- Member: MICCAI, IEEE (Senior), ACM, AAAS, ASA, Royal Statistical Society (RSS), RSNA (Associate), SNMMI
- Editorial Board Member: Elsevier CBM, Medical Physics
- Program Committee Member for many international conferences
- Served as a reviewer for more than 20 peer reviewed journals
- Associate Editor: Medical Physics
- Panelist: NSF, Czech Science Foundation, Breast Cancer Now (UK), Fondation Recherche Medicale (FR), AAAS
- More than 25 invited talks in nationwide and international.

Honors & Awards
- 2016-Best Scientific Reviewer Award, MICCAI.
- 2016-Department of Health/FL rapid pilot Grant: Zika Imaging of fetuses for early detection
- 2016-Mayo-UCF Seed Grant: Pancreas tumor detection/characterization
- 2015-FL Hospital-UCF Seed Grant: Machine Learning for improvement of cortical response assessment in Epilepsy
- 2016-Nvidia GPU grant
- 2014 & 2011-RSNA Certificate of Merit (3 times)
- 2014-IEEE TBME Highlights on the Cover-Novel PET Image Segmentation methodology
- 2013 & 2012-Winner of NIH FARE Award
- 2013-Highlighted in AuntMinnie and MDLinx due to Novel MRI/PET Image Analysis Software
- 2012-Best Poster Prize, Molecular Imaging of Infectious Disease

- Database Systems
- Software Engineering

Other Experience
- CS/IT Undergraduate Coordinator and Undergraduate Committee Co-Chair, Dept. of Comp. Sci., 2006 – Present.
- Computer Programming Team Faculty Advisor, 1989 – present.
- Local chapter of UPE Faculty Advisor, 1991 – present.

Professional Activities
- ACM-ICPC International Steering and Executive Committee Member, 1998 – present.
- Int’l UPE Executive Council Member, 2000 – present.

Honors & Awards
- Outstanding Engineer Award, Computer Chapter, IEEE Orlando Section, 1995.
- Excellence in Undergraduate Teaching Award, College of Arts & Sciences, UCF, 1998.
- Presidential Award for Special Merit (for Exceptional Professional Achievements), UCF, 2000.
- ACM-ICPC Measures Distinguished Service Award, Selected 2008; Award of Excellence, March 2008; and Distinguished Service Award, 2000.
- ACM-ICPC Award, Southeast Regional
- ACM-ICPC Award, World Contest Finals
Sumanta Pattanaik

Associate Professor
Ph.D., Computer Science;
Birla Institute of Technology and Science, Pilani, India, 1993

Contact
sumant@cs.ucf.edu

Research
- Medical Volume Visualization
- Real-time Realistic Rendering, Material Modeling
- Nature Rendering
- Interactive Global Illumination
- High Dynamic Range Imaging & Display

Other Experience
- Visiting Faculty: University of Southern California, Summer and Fall 2015; Yale University, Fall 2008; University of Girona, Spain, Spring and Summer 2009.
- Research Associate, Program of Computer Graphics, Cornell University, 1995-2001
- INRIA Post-Doctoral Fellow, IRISA-INRIA, Rennes, France, 1993-1995
- Senior Staff Scientist, National Center for Software Technology (NCST), Bombay, India, 1985-95

Professional Activities
- Program Committee Member: I3D 2017, SCCG 2017.

Honors & Awards
- UCF TIP Award, 2011.

Active Grants
- NSF Grant- 2012-2017: A Unified Approach to Material Appearance Modeling
- UArizona-DARPA Grant (2016-2018). REVEAL: Light Field Measurement and Exploitation at Information Theoretic Limits
