OVERVIEW OF RESEARCH IN COMPUTER SCIENCE AT UCF

Research in Computer Science spans a wide range of topics. At UCF research in Computer Science emphasizes:

- Innovative uses for computation (including new applications, algorithms, protocols, and tools),
- Studies of issues surrounding computation (including security, theory, human-computer interaction, and insights into the design, programming and verification of programs and systems), and
- Investigations into the nature of computation (including questions such as: what is intelligence, and what are
  Typically, writing a computer program is not considered worthy of a research publication, unless the program is being used
to demonstrate some new tool, programming technique, or has some other purpose driven by the kinds of Computer Science
questions described above. Thus, while we are eager to partner with others in research, our potential research partners need
to be aware that computer science research is not the same as programming.

Our faculty have won many awards (such as best paper awards at conferences) and have been recognized by various
professional societies. We have on our faculty 6 Fellows of the IEEE, 1 ACM Fellow (retired), 1 IAPR Fellow, 1 SPIE
Fellow, and 2 Fellows of the AAAS. Our faculty also includes 5 NSF CAREER award winners, 3 AFOSR Young
Investigator award winners, and 2 DARPA CS Study Group award winners.

In what follows we give a brief overview of the main research areas in Computer Science at UCF.

**Computer Vision** addresses the problem of how to use computers to process visual information, including pictures and
videos. Specific problems include detection and recognition of objects, features, or actions, segmentation of videos, and
using image or video data in computational processes. Drs. Bagci, Foroosh, da Vitoria Lobo, Mahalanobis, Shah and Welch
work in this area.

**Image and Video Processing** addresses the problems of acquisition, storage, retrieval, and processing of images, videos,
and high dimensional signals for extraction and analysis of useful information for human users, robots, and autonomous
systems. Specific problems include design and analysis of imaging sensors, high-dimensional signal representation and
transformation, compression methods, image/video retrieval, 3D sensing and modeling, medical imaging, space imaging,
and live video computing. Drs. Bagci, Foroosh, and Hua work in this area.

**Virtual Reality (VR)** is a multidisciplinary area of research aimed at interactive computer-mediated immersive simulations
of environments or experiences typically involving sight, sound, and touch. Simulations involving a blending of real and
virtual objects is often referred to as Augmented Reality (AR). Research in VR/AR encompasses a wide range of
fundamental topics, including computer graphics, multi-modal systems (e.g., displays, tracking, haptics, robotics), 3D
interaction, illusions of presence/tele-presence, and human factors. One of our current foci is on human-centered experiences
involving avatars and virtual humans for training teachers, healthcare practitioners, and military personnel.

**Human Computer Interaction (HCI)** is the scientific study how humanity communicates with all aspects of computing
technology. HCI is an interdisciplinary field that spans computer science, computer engineering, psychology, human factors,
and cognitive science. In our department, we focus specifically on developing and evaluating interactive systems that help
to improve people's lives when using computer-based environments. We focus on improving the user experience in
application areas such as education, entertainment, medicine, robotics, and general work productivity. Drs. Gonzalez,
Hughes, LaViola, Welch, and Wisniewski work in these areas.

**Artificial Intelligence (AI)** seeks to understand the fundamental nature of intelligence and how to make computers exhibit
intelligent behavior. **Machine Learning** addresses the problem of how to automatically learn concepts and behaviors from
data. With seven faculty in AI and machine learning, UCF CS is highly active in these areas. Major research strengths
include complex systems, data mining, diagnostics, evolutionary computation, intelligent simulation, knowledge
representation, learning from observation of human performance, multi-agent systems, natural language processing, neural
networks, neuroevolution, robotics, and social informatics. Dr. Bagci, Drs. Boloni, Gonzalez, Hu, Liu, Stanley, Sukthankar,
and Wu work in this area.
Computer Graphics addresses the problem of how to produce images of objects from their mathematical descriptions using computers. Examples of specific research foci include how to render realistic looking objects, how to animate such objects, and how to use rendering and animation for simulation and interactive training including Virtual Reality and Augmented Reality. Some of our work involves computer vision/image processing, for example interactive view synthesis and Spatial Augmented Reality. Drs. Hughes, Pattanaik, and Welch work in this area.

Software Engineering addresses the problem of how to produce quality software on time and within a specific budget. Systems work addresses the problem of how to build large computer systems that accomplish some specific purpose. Specific research problems in Software Engineering that we are investigating include: how best to describe what software systems are supposed to do (specification), how to ensure that computational systems behave correctly (verification), model checking of software and hardware systems with a particular emphasis on scalable formal verification of cyber-physical systems and quantitative computational models, how to parallelize systems for maximum efficiency, how to model, analyze, and optimize the performance of software, and how to build large, concurrent and distributed systems. Drs. Dechev, Gazzillo, Hua, Jha, Leavens, Marinescu, Orooji, Turgut, and Wang work in these areas.

Database research addresses the problem of storage and retrieval of data. Information must be stored in a fashion that allows both efficient and convenient retrieval by people and applications. Specific problems addressed in research at UCF include techniques for parallel and distributed processing of very large data sets, database management as a service, moving object databases for mobile computing, querying multimedia databases that may include online cameras as a special class of storage devices, database management in the Internet of Things, and data privacy and security. Drs. Bassiouni, Hua, Llewellyn, Orooji, and Zou work in this area.

Parallel Computation deals with the theory and practice of organizing computations to run faster on machines with several processors. Different models of parallelism are studied along with parallelizability of various problems. Practical aspects involve designing parallel algorithms and data structures to solve compute-intensive problems on rapidly-evolving platforms with massive parallelism, fast and efficiently. A key challenge for creating and adapting parallel software applications is the high architectural complexity of HPC systems in terms of their degree of concurrency and heterogeneity, sensitivity to communications and data movement, and requirements for locality. Enabling effective large-scale multiprocessor computing will have an impact that cuts across multiple areas of science. There are still many barriers involved in building efficient HPC software applications and hardware platforms. Research at UCF aims to provide the fundamental tools and techniques for understanding how to design applications and algorithms for the rapidly evolving massively parallel chip architectures. Drs. Dechev, Hua, Jha, Marinescu, and Wang work in this area.

Networking and Mobile Computing is concerned with designing efficient communications protocols and architectures for exchanging data among computers and mobile devices. The scientific results of the field enable a wide range of networking applications and enhance the real-world experience of network and mobile users. Research areas investigated by our faculty include but are not limited to resource management techniques in ad hoc, cellular, and cognitive radio networks, challenging topics in sensor networks such as intruder tracking, underwater sensors and maximizing value of information, intelligent sharing of wired and wireless bandwidth, and real-time transmission of audio and video over wireless networks/Internet. Drs. Bassiouni, Chatterjee, Fu, Hua, Mohaisen, and Turgut work in this area.

Computer Security is concerned with designing mechanisms for protecting computers and networks from attacks, keeping information confidential and safe from tampering, preventing unauthorized access to resources, and providing robust security to various applications including e-commerce transactions. Research areas investigated by our faculty include but are not limited to Intrusion Prevention and Detection, Malware Propagation Modeling and Analysis, Security of Wireless Networks, Sensor Networks and Vehicular Ad hoc Networks, Authentication Protocols, and Cloud Security. Digital Forensics addresses the problem of recovering evidence (e.g., to be used in court) from computers, mobile devices, or any storage media that may hold data in binary form. Drs. Bassiouni, Fu, Jha, Gazzillo, Leavens, Mohaisen, Wocjan, and Zou work in these areas.
Bioinformatics is an interdisciplinary field to study various biological problems using advanced computational and statistical methods. With large-scale high-throughput biological data rapidly accumulated, this fast-growing field has become an indispensable part to biology research, also an important avenue for computer scientists to study biological problems. Bioinformatics research at UCF CS focuses on the following several areas: computational genomics, metagenomics, non-coding RNA and RNA genomics, systems biology to model gene protein interactions and gene regulation, and machine learning and data mining algorithms to integrate massive biological data and networks. Computational systems biology is the new and upcoming inter-disciplinary science that combines approaches from dynamical systems, control theory, formal methods, and process algebra to study the complex interactions within and among biological systems. Building on the existing success of bioinformatics and bio-imaging research, computational systems biology constructs mathematical and computational models so as to facilitate a holistic understanding of biological systems; hence, it differs fundamentally from the reductionist view of traditional studies in life sciences. Together with partners from medical schools and national laboratories, we are studying translational computational systems biology with applications in drug design, metabolic networks, clinical-decision making, and the design of verified biomedical cyber-physical systems. Drs. Hu, Jha, Thankachan, Yooseph, Shaojie Zhang, and Wei Zhang work in these areas.

Theory of Computing addresses the problem of understanding the fundamental nature and limits of computation. Algorithms addresses the problem of how to best solve specific problems using minimal time and space resources. Quantum Computing addresses the problem of how to compute using quantum mechanical phenomenon, such as photons. Specific problems in the Theory of Computing include how to classify problems as to their degree of difficulty. Specific problems in Algorithms include finding (optimal) algorithms for computing problems, and proving that a given problem requires a certain minimum amount of resources for its solution. Specific problems in Quantum Computing include finding algorithms for solving problems efficiently using quantum information. Drs. Deo, Hughes, Marinescu, Thankachan, Wocjan, Yooseph, and Shaojie Zhang work in these areas.

Computer architecture research focuses on designing computer systems optimized for high performance, energy efficiency, and scalability or some combination thereof. This research may focus on many aspects of computer systems including the design of processors, memory systems, GPUs, mobile and embedded devices, big data I/O systems, networks, and large-scale parallel machines. Specific problems include the hardware/software co-design of energy efficient architectures for heterogeneous multicore processors and understanding the interaction of file systems and parallel I/O systems in big data applications and its implications for modern file system design. Drs. Heinrich and Solihin work in this area.

- International Society for Artificial Life (ISAL) Award for Outstanding Paper of the Decade 2002-2012
- UCF Reach for the Stars Award, 2014
- UCF CECS Dean’s Research Professorship Award, 2013
- UCF Research Incentive Award (RIA), 2012
- ACM Distinguished Speaker, named September 2011
- UCF Teaching Incentive Program (TIP) Award, 2011
- 2008 DARPA Computer Science Study Group (CSSG)
- Outstanding Graduate Teaching Award (School of EECS), 2008
- Finalist, 2010 Indie Game Challenge (12 of 250 independent games were chosen)
Gita R. Sukthankar

Associate Professor
Ph.D., Robotics; Carnegie Mellon University, 2007

• Multi-agent systems
• Machine learning
• Activity/plan recognition for:
  • Games and simulation systems
  • Assistive technologies
  • Human-robot interaction
• Social-computational systems

Other Experience
• HP Labs - Cambridge Research Laboratory
  Member of Research Staff, 2000–2003
• PARC – Sabbatical Visitor, 2015-2016

Professional Activities
• DARPA ISAT Advisory Group (2015-2018)
• IFAAMAS Board of Directors (2016-2022)
• General chair, AAAI Conference on AI and Interactive Digital Entertainment (2013)
• Lead editor on Plan, Activity, and Intent Recognition: Theory and Practice and Social Interaction in Virtual Worlds

Honors & Awards
• UCF Reach for the Stars Award (2015)
• CECS Dean's Research Professorship Award (2013)
• UCF Research Incentive Award (2013)
• UCF Faculty Excellence for Doctoral Mentoring (Engineering and Sciences) (2012)
• ACM and IEEE Senior Member
• CECS Distinguished Researcher (asst. professor), 2010
• Charles N. Millican Faculty Fellow (2010, 2012)
• DARPA Computer Science Study Group, (2009)
• NSF CAREER (2009)
• Air Force Young Investigator Program (2009)
• ONR Summer Faculty Fellow (2008)

Sharma Thankachan

Assistant Professor
Ph.D., Computer Science; Louisiana State University, 2014

Contact

• Parallel and External Memory Algorithms
• Algorithms for Sequence Analysis, Motivated from Applications in Bioinformatics
• Advanced Data Structures for
  • Succinct/Compressed Text (String) Indexing
  • Information Retrieval and Databases
  • Geometric Range Query Problems

Other Experience
• Research Scientist/Post-Doctoral Fellow (2014–2016): School of Computational Science and Engineering, Georgia Institute of Technology, Atlanta.
• Post-Doctoral Fellow (2014-2014): School of Computer Science, University of Waterloo, Canada

Professional Activities (Program committee member)
• SPIRE 2018: 25th International Symposium on String Processing and Information Retrieval.
• HiCOMB 2018: 17th IEEE International Workshop on High Performance Computational Biology)
• ICCABS 2018: IEEE International Conference on Computational Advances in Bio and Medical Sciences.

Honors & Awards
• Dissertation year Fellowship (2013-2014), Louisiana State University.
• International Exchanges 2018 Award by the Royal Society.

Active Grants
• NSF grant (2017-2020): Sequential and Parallel Algorithms for Approximate Sequence Matching with Applications to Computational Biology ($306,000)

Research [http://www.cs.ucf.edu/~syooseph/]
• Algorithm design and combinatorial optimization
• Computational Biology and Bioinformatics: Genomics; Metagenomics; Sequence Assembly; Phylogenetics; Clustering and Ordination; Functional Genomics; Homology Detection; Biomarker Discovery; Machine Learning
• Microbiome research: Host-microbiome associations and mechanisms in the context of health and disease; Microbial diversity in different environments including water and air; Analysis and integration of ‘omics’ data

Other Experience
• Human Longevity Inc. (2014-2016): Senior Director of Bioinformatics / Microbiome Lead
• J. Craig Venter Institute (2003-2016)
  o Professor of Informatics (2014-2016)
  o Director of Informatics, San Diego (2009-2011)
  o Associate Professor of Informatics (2009-2013)
  o Senior Computational Scientist (2003-2008)
• University of Southern California (1998-2000): Research Associate
• DIMACS, Rutgers University (1997-1998): Postdoctoral Fellow
• Lucent Technologies, Bell Labs (1997-1998): Consultant

Professional Activities
• On editorial board of Microbiome journal
• ICCABS 2017 General Chair
• AlCoB Program Committee (2018, 2017)
• Ad-hoc reviewer for various journals including Nucleic Acids Research, Bioinformatics, and PLOS
• NSF Reviewer (2017, 2015, 2014)
• NSF BIGDATA panel member (2012)
• NIH Reviewer GCAT Study Section (2013, 2011)
• ISMB Program Committee (2014)
• RECOMB and RECOMB-SEQ Program Committee (2013)
• Vice Chair for ACM BCB 2011

Honors & Awards
• Over 29,000 citations of research (source Google Scholar)
• Several publications recommended by Faculty of 1000
• GRASP algorithm featured in Biotechniques (2015)
• Postdoctoral Fellowship from NSF funded Program in Mathematics and Molecular Biology (1998-2000)
• Postdoctoral Research Fellowship from NSF funded DIMACS (1997-1998)
• Dean’s Fellowship (1992-1993)
