

# **COP 2930 - Introduction to Computing**

## **Day 1 - Suggested Exercises**

Objectives:

1. Run a python program
2. Understand and use the escape characters.

Make sure you place several comments throughout your code.

### **Part A**

Copy this program and run it successfully. You may change the output, but if you do, be creative. ☺

```
# Author: Your name here
# Date: the date
# Description: Prints a welcome message.

print("Welcome to programming at UCF!!!")
```

### **Part B**

Modify the program in part A. Print your name, where you are from and one fun fact about you. Use at least one escape sequence.

### **Part C**

Use escape sequences for both backslashes and double quotes to print out the following:

```
\\\\\\\\\\\\\\\\\\\\\\\\\\\\\\\\\\\\\\\\
\\ "GO KNIGHTS!!!" \\
\\\\\\\\\\\\\\\\\\\\\\\\\\\\\\\\\\\\\\\\
```

### **Part D**

Pick a phrase that you really like and write a python program to print it out 100 times. (Hint: remember that `print("hi"*100)` will print hi 100 times, once per line.)
