COP 2930 - Introduction to Computing
Input Files Two - Suggested Exercises

Objective:
1. Practice writing programs that read input from files.

1) Edit the rover program from class so that it prints out step by step where the rover goes.

2) Edit the weather program from class to calculate the average temperature of each month and print out that data.

3) Edit the weather program to find out some information you are interested in, about our average temperature in Orlando form 1995 on.
