

CAP 6671: Class Presentations

Dr. Gita Sukthankar
gitars@eecs.ucf.edu

Part of being an effective researcher is learning how to present your research to other people. To practice this skill, you will be presenting a paper to the class during the second half of the semester.

- Select a paper that has been written in the past 4 years that has appeared in an AI/robotics conference or journal
- Paper should be between 6-20 pages in length and relate to the themes of this class.
- Presentation should be 10-15 minutes long.
- Remote students will have the option of presenting to me over audio link.
- Paper should be approved at least 3 days before presenting.
- When presenting the paper, pretend to be the author of the paper delivering it at a conference rather than leading a discussion group; if you talk about the strengths and weaknesses of the paper save it for the Conclusion slide.
- Presentations should be completed between Mar 16rd and Apr 23rd

This assignment will be graded on a 15 pt scale, based on:

- Clarity of spoken presentation
- The quality of your presentation slides
- Your understanding of the paper and ability to answer questions
