

Instructions for creating a project with existing file in JCreator

Setup

- 1) Place all .java files in a directory and remember the location of this directory
- 2) Create a new project in JCreator
 - a) File -> New -> New Project
 - b) For Project Template choose empty project
 - c) Give the project any name you wish, and note the path where the files will be saved
- 3) Add files to the project
 - a) Project -> Add files
 - b) You can select all at once
(can also drag from a windows directory display and drop into the project area)

Compilation

Build -> Compile Project (F7)
