

CDA 6530

$$\square P(A \cup B) = P(A) + P(B) - P(A \cap B)$$

Note Title

 $A \cup B$  $\downarrow A \cap B$

$$P(A \cup B) = P(A) + P(B) - P(A \cap B)$$

$$P(B^c \cap A) = ? = P(A) - P(A \cap B)$$

$$P(B^c \cap A) + P(A \cap B) = P(A)$$

$$\square P(A|B) = P(AB)/P(B)$$

$$P(AB) = P(A|B) \cdot P(B)$$

$$P(s|B) = P(s) \text{ if } s \in B$$

- \square A box with 5000 chips, 1000 from company X, other from Y. 10% from X is defective, 5% from Y is defective.
- \square A="chip is from X", B="chip is defective"

$$P(B) = \frac{1000 \times 0.1 + 4000 \times 0.05}{5000} = \frac{300}{5000} = 6\%$$

$$P(A \cap B) = P(AB) = \frac{1000 \times 0.1}{5000} = \frac{100}{5000} = 2\%$$

$$P(A|B) = \frac{100}{300} = \frac{1}{3}$$

$$\square P(A|B) = P(AB)/P(B)$$

$$\frac{1}{3} \rightarrow 0.02 / 0.06 = 1/3$$
